Jarvis Cached Reviews

Hinglish update: kya badla, kaise kaam karta hai, aur abhi kya live-test nahi hua.

Preview note: Upar wali image updated review card ka illustrative UI preview hai - live website ka screenshot nahi. Isme sample copy hai; real IMDbio/Gemini data nahi.

Public + cached Ek title par ek saved AI editorial review; repeat visitors ko wahi text.	**Dono editions** Hinglish aur English ke language tabs.	**Manual review first** Owner ka apna review hamesha priority.

Kya implement kiya

1. On-demand generation, repeat par cache

Exact title search result ya movie detail page kholne par browser public Jarvis endpoint ko call karta hai. Agar manual review nahi hai aur zaroori services configured hain, Gemini se ek review banta hai. Review existing Prisma Review fields mein PUBLISHED Jarvis editorial record ke roop mein save hota hai. Agle visitors saved review dekhte hain - har visit par naya Gemini draft nahi banta.

2. Owner ki writing voice, dono languages

Server owner ke apne published, non-spoiler reviews se max 5 style samples use karta hai. Jarvis broad writing style (rhythm, vocabulary, Hinglish-English mix) seekhta hai; purani lines ya opinions copy nahi karne ki instruction hai. Naya review Hinglish aur English dono mein save hota hai, page par language tabs hain.

3. Manual review ki priority

Title par owner ka manual review milte hi auto Jarvis card hide hota hai aur naya Jarvis review generate nahi hota. Transaction ke andar save se just pehle bhi manual review check hota hai. Existing manual review ko overwrite nahi kiya jata.

4. IMDbio facts + community score separation

IMDbio se poster, rating, cast, synopsis, genres, runtime aur director data liya jata hai. Local record ko IMDbio ID se match karke available facts refresh kiye jaate hain; external IMDbio title khulne par catalogue record create ho sakta hai. Public non-spoiler IMDbio review excerpts sirf available hon to use hote hain. AI review ka stored score community average/count/rating buckets se exclude hai.

5. Trailer playback

Existing trailer player code verify kiya: playback official YouTube IFrame API se hota hai, title page aur saved trailer modal dono mein. YouTube API key/service ke bina discovery ya playback ka live integration test nahi hua.

User ko kya dikhega?

- **Search:** sirf exact title match par Jarvis card load hota hai; autocomplete ke har result par generation nahi hoti.
- **Movie/series page:** Jarvis review, IMDbio rating/source note, Hinglish/English tabs aur AI disclosure.
- **Manual review maujood ho:** Jarvis card render nahi hota; existing owner review hi dikhta hai.
- **Service/config unavailable ho:** generic unavailable state; fake review publish nahi hota.

Verification aur remaining setup

Checks jo chalaye

- TypeScript check: pass (npx tsc --noEmit).
- Whitespace/diff validation: pass (git diff --check).
- Next.js production build compile hua; static data collection mein placeholder Prisma configuration ki expected warnings aayi.
- Local preview: home/search HTTP 200; malformed Jarvis auto-review request HTTP 400.
- Current branch clean; commit a58a402, branch arena/e9a86fc0-cinenvood par pushed.

Abhi live-test kyun nahi hua?

Workspace mein production database credentials, IMDbio service URL/token, aur GEMINI_API_KEY configured nahi hain. Isliye actual movie data fetch, Gemini generation, database persistence/reuse aur manual-review suppression ko real DB ke against verify nahi kar saka. PDF ka preview sample UI hai, live screenshot nahi. Credentials configure hone ke baad in end-to-end flows ka test karna baaki hai.

> **Deployment prerequisites:** DATABASE_URL / DIRECT_URL, IMDbio API URL + token, GEMINI_API_KEY. Public auto-generation IP rate-limited hai (4 generations / 15 min; title checks 90 / min). Prisma schema change nahi kiya gaya.

Short version: public bilingual review flow code mein ready hai; configured services aur real DB ke bina actual reviews abhi generate/cache hote hue prove nahi hue.
