01 · STABILITY

“Server-side exception” — asli wajah mil gayi

Live site par jo error aa raha tha, wo code ka bug nahi tha. Supabase ka **pooler** idle connection drop kar raha tha (*Connection reset by peer*, Prisma *P1017*) — aur us waqt koi error boundary na hone ki wajah se poora page mar raha tha. Ab teen layer ka protection hai:

Layer	Kya karta hai	File
Retry	Transient pooler errors par 140 ms → 320 ms retry, phir hi fail	`lib/prisma.ts`
Boundary	Branded “thodi der ke liye down” card + retry button, red Next error nahi	`app/error.tsx`
Degrade	Sirf jo query fail hui wo section khaali, baaki page paint hota hai	`lib/safe.ts`
Diagnose	Env + DB + tables + columns + row counts, 503 jab kuch bhi galat	`/api/health`

/status — wahi report jo browser mein khul jaati hai: env vars, DB ping, tables, counts, region.

Ek aur cheez pakdi: purani site `cinemood.vercel.app` par abhi bhi legacy Vite build chal raha hai (wo `/assets/index-*.js` serve karta hai, root div khaali). Next.js app `cinenvood.vercel.app` par live hai. Dono ka pata ab documented hai — domain sirf sahi project par point karna hai.

Verification

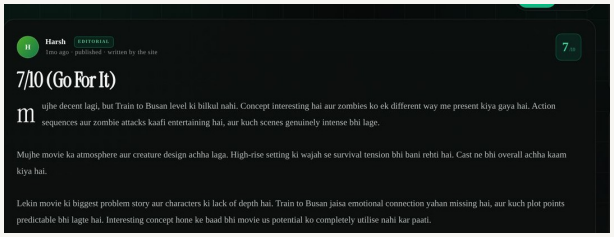

- `/api/health` → 200 + `ok:true` jab sab theek (local aur live dono par check).
- Sab public routes 200: `/ /movies /movies/[slug] /reviews /reviews/[id] /community /status`.
- Prisma client schema ke baad generate hota hai — `bodyEn` missing wala TS error isi se aaya tha.

02 · BILINGUAL VERDICTS

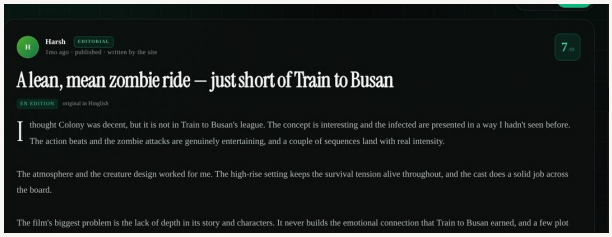

Review, visitor ke desh ke hisaab se

Har editorial verdict ab **do baar** likha gaya hai — Hinglish (`headline / body`) aur English (`headlineEn / bodyEn`). Machine translation nahi — dono copy haath se likhi/translate ki gayi hai, isliye tone same rehti hai. Community reviews jaisi likhi gayi hain waisi hi dikhti hain.

`cookie cm-edition → x-vercel-ip-country → Accept-Language → default “en”`
Hinglish: IN · NP · BD · PK · LK · AE · SG · MY | baaki duniya: English | switch se user khud badal sakta hai (1 saal tak yaad rehta hai)

India / Hinglish
same verdict, Hinglish copy

International / English
EN EDITION chip + English copy

Ek hi verdict, do zubaan

Edition	Headline	Body (pehli line)
Hinglish	7/10 (Go For It)	Mujhe decent lagi, but Train to Busan level ki bilkul nahi…
English	A lean, mean zombie ride — just short of Train to Busan	I thought Colony was decent, but it is not in Train to Busan’s league…

Switch har jagah

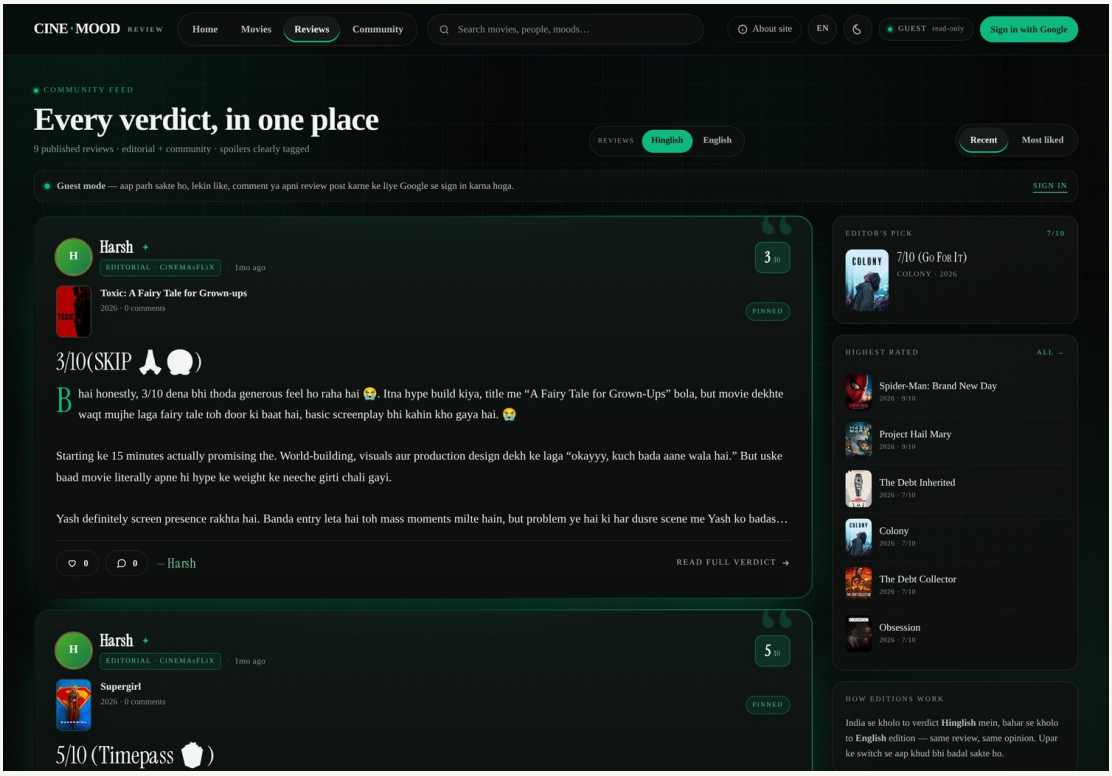

- Pill switch: `/`, `/movies`, `/movies/[slug]`, `/reviews`, `/reviews/[id]`, `/community`.
- Jab doosri bhasha dikh rahi ho to headline ke neeche chhota chip: **EN EDITION · original in Hinglish** — koi confusion nahi.
- 9 legacy verdicts ki English copy `prisma/legacy-en.json` mein hai, deploy hone par `prisma/apply-en.mjs` DB mein likh deta hai.

9/9	7	0
verdicts ab do bhasha mein	desh → Hinglish edition	machine translation

03 · PREMIUM UI

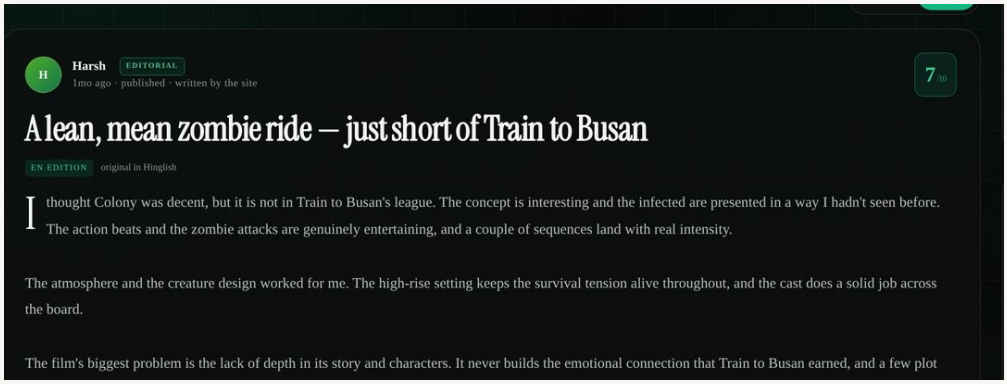

Review section ab publication jaisa

Card ko dobara likha: byline serif mein **Harsh**, saath mein `EDITORIAL · CiNEMAsFLiX` chip, rating alag badge mein, headline Instrument Serif, drop-cap, aur body 7 line par clamp with **Read full verdict** →. Feed ke right side mein rail: Editor’s pick, Highest rated, aur “editions kaise kaam karte hain”.

/reviews — premium byline, clamped body, right rail. Bade screen par 2-column layout, 1080px ke neeche stack.

Pehle	Ab
Plain sans byline, rating text name se chipak raha tha	Serif byline + alag rating badge + edition chip
Poori review card mein — feed bhoola-bhatka lagta tha	7-line preview + Read full verdict
Khaali right side	Editor’s pick · Highest rated · edition explainer

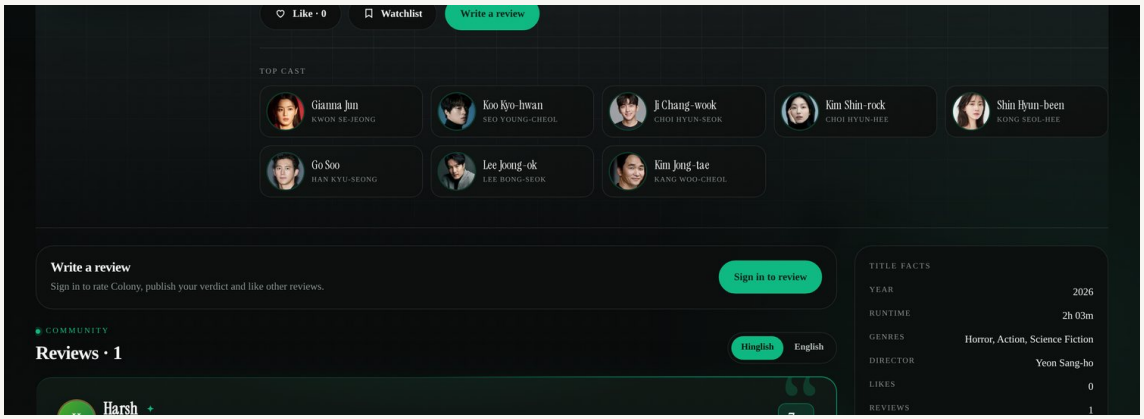

Detail page — EN EDITION chip, drop-cap body, “About the film” aur “More reviews” rail.

Fonts: **Instrument Serif** (headlines), **Poppins** (UI), **Outfit** (labels/buttons), **IBM Plex Mono** (meta) — sab `next/font` se self-hosted, koi third-party request nahi aur layout shift nahi.

04 · RICH DATA

Cast photos — film page ab bhara hua lagta hai

TMDB ke har title page se cast block scrape kiya (`li.card` → naam, character, `w138_and_h175_face` photo), JSON mein save kiya aur `Title.cast` (JSONB) mein daal diya. Numbers: **266 titles**, **1833 photos**.

Film page — circular portraits, naam + character, desktop par 5 per row, mobile par 2.

Gotcha jo ek run kha gaya: `cast` Postgres ka keyword hai. `UPDATE … SET cast = $2::jsonb` error 42601 deta hai — column ko `"cast"` likhna padta hai. Script aur importer dono fix ho gaye.

Photos jo DB mein hain (sample)

Mark Hamill
Luke Skywalker

Tom Hanks
Forrest Gump

Jim Carrey
Joel Barish

Edward Norton
Derek

Guy Pearce
Leonard

Russell Crowe
Maximus

Kaise chalta hai

- `node prisma/cast-photos.mjs --fetch` → `prisma/cast-photos.json`
- `node prisma/cast-photos.mjs --apply` → DB update (idempotent, 266 rows)
- Fresh setup par `node prisma/import.mjs` khud hi cast + English editions apply kar deta hai.

Catalogue — 270 titles, poster-first

Batman: Knightfall

Avatar Aang

Swapped

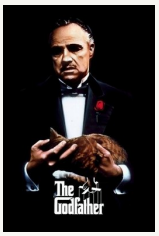

Accidental Partners

Facing El Chapo

Shawshank

The Godfather

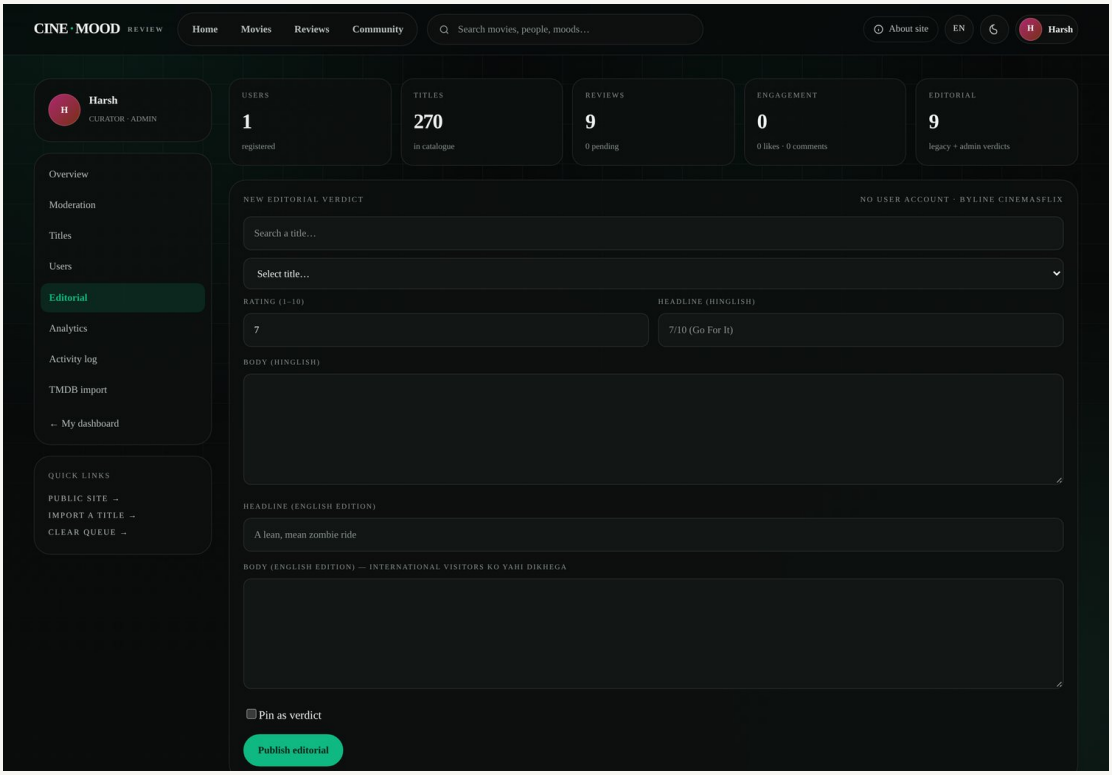

Project Hail Mary

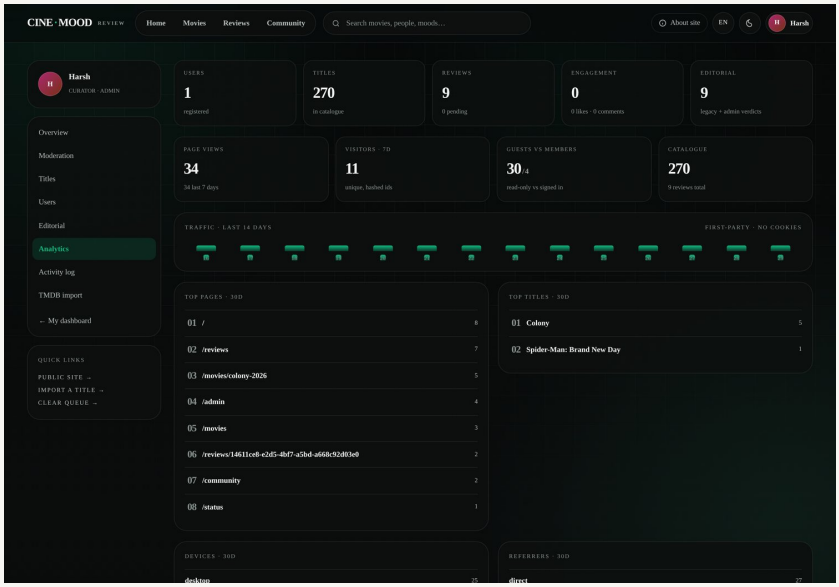

05 · ADMIN

Editorial panel — site ke apne verdicts

/admin me naya tab: title search karo, rating 1–10, Hinglish + English dono likho, pin-as-verdict tick karo, publish. Neeche table batati hai kis verdict ki **English edition missing** hai — translation debt dikhta rehta hai. Yeh sab `/api/admin/editorial` se hota hai: admin-only, rate-limited, har write ka AdminLog.

/admin?tab=editorial — searchable title picker, do-language editor, pinned verdict flag.

/admin?tab=analytics — PageView rows se banaye gaye numbers (cookie-less, visitor hashed).

Kaise use karein

- Naya verdict: **Editorial** tab → title search → rating → Hinglish body → English body → Publish.
- Purana verdict sudhaarna: table mein **Edit** → dono bhasha update → Save (audit log mein entry).
- English missing column dekh ke pata chalta hai kaunsa verdict abhi sirf Hinglish mein hai.
- Verdict delete karna safe hai — user reviews aur comments alag table mein hain.

06 · HOSTING

Deploy ki asli picture

URL	Kya chal raha hai	Kya karna hai
cinenvood.vercel.app	Next.js app (Round 6 deploy, runtime bom1)	Isko production domain banado
cinemood.vercel.app	Purana Vite SPA — khaali `#root`, hence “error”	Domain hata do / redirect kar do

Vercel environment variables

Key	Value (plain, no quotes)
DATABASE_URL	Supabase pooler 6543 · ...?schema=cinemood&pgbouncer=true&connection_limit=10&sslmode=require
DIRECT_URL	Supabase direct 5432 · ...?schema=cinemood
AUTH_SECRET	yesa hi jo local .env mein hai (32-byte base64)
AUTH_TRUST_HOST	true
NEXT_PUBLIC_SITE_URL	https://cinenvood.vercel.app
ADMIN_EMAIL	aapka asli Gmail (admin login isi se)
AUTH_GOOGLE_ID / _SECRET	Google Cloud OAuth client (docs/GOOGLE-AUTH-SETUP.md)
TMDB_API_KEY	pehle se set hai — overwrite nahi karna

Deploy steps: Supabase par `npx prisma db push` → Vercel par repo import (root = repo root, framework Next.js, install `npm install --legacy-peer-deps`) → env vars paste → deploy → `/api/health` kholo. Sab green matlab site theek hai.

Deploy ke baad 4 checks

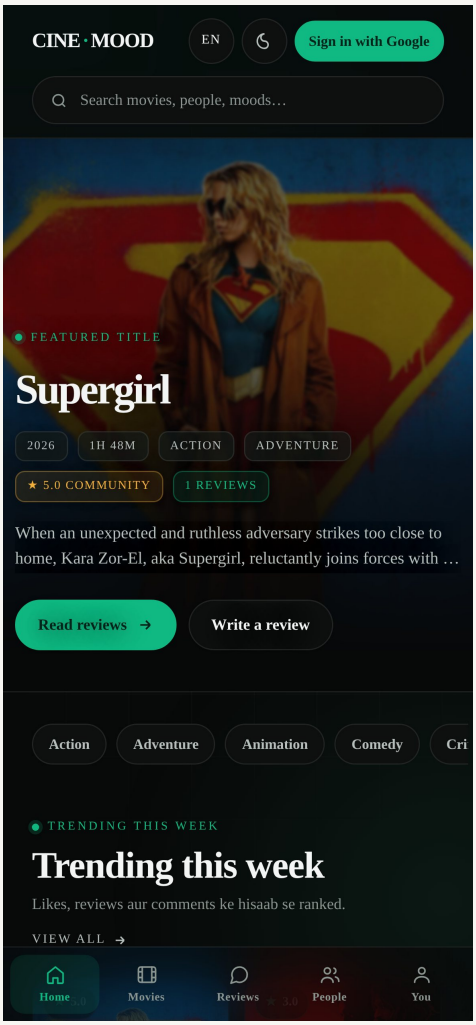

Check	Expected
`/api/health`	HTTP 200, `ok:true`, saare required vars OK
`/status`	Sab green ticks, row counts = 270 titles / 9 reviews
`/movies/colony-2026`	Cast photos dikhein (DB se), poster aur score ring
`/admin`	Google login ke baad hi khule, warna /login?next=/admin

Env file ka plain block repo mein `.env.vercel-copy.txt` ke naam se hai (git-ignored). Bas copy → Vercel → paste → Save → Redeploy. Quotes, commas ya extra space nahi.

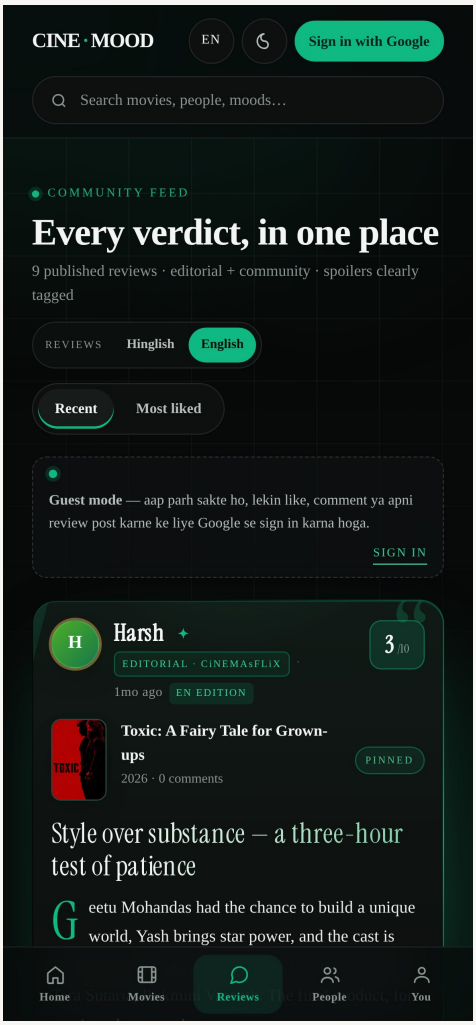

07 · RESPONSIVE

Mobile par bhi wahi premium feel

Bottom tab bar, hero scrim (text padhne layak), chips ek hi row mein scroll, cast grid 2 per row, admin tables horizontal scroll ke saath. 390×844 par 0px horizontal overflow.

Home

Reviews feed

Mobile QA

Kya check kiya	Result
390×844 par horizontal overflow	0px — koi side scroll nahi
Review card ka byline (avatar + naam + rating)	3-column grid, naam 2 line mein bhi tootta nahi
Bottom tab bar (Home · Movies · Reviews · People · You)	Safe-area ke saath, content ke upar float
Cast grid	2 per row, photo 38px, role ellipsis
Admin tables	Horizontal scroll, headers pinned

Guest mode

- Bina login: sab padho, lekin like/comment/review par saaf note — “sign in to react”, dead button nahi.
- Guest id sirf `localStorage` mein; server par user row kabhi nahi banti.
- Fake profiles zero: **User table 0 rows**, admin access sirf `ADMIN_EMAIL` wale Google account se.

08 · SECURITY & ROADMAP

Access model aur aage ka plan

Kaun kya kar sakta hai

Role	Read	Like / comment / review	Admin panel
Guest (no login)	Sab kuch	Nahi — sign-in note	Nahi
Google user	Sab kuch	Haan (rate-limited)	Nahi
Admin (`ADMIN_EMAIL`)	Sab kuch	Haan	Haan + editorial + audit log

Aage kya — 7 din ka plan

Kab	Kaam	Kyun
Aaj	Domain `cinemood.vercel.app` ko Next project par point karo	Purana Vite build hi “site down” jaisa dikhta hai
+1 din	Google OAuth keys (10 min) + ADMIN_EMAIL confirm	Uske baad real users, comments, likes live
+2 din	Naye verdicts admin se — English edition ke saath	International traffic ke liye SEO + trust
+3 din	10 dost = closed beta, mobile par test	Real feedback, warna polish andhere mein
+7 din	OMDb enrichment (IMDb/RT/Metacritic) chalu karna	Score block abhi TMDB par hai, OMDb add-on hai

Abhi ke numbers

270	9	1833	0	0px
films	editorial verdicts	cast photos	fake users	mobile overflow

Links

- Repo: `github.com/Dev-Harshupadhyay/Cinenvood` (commits `178b014…7bb5ba0`)
- App: `cinenvood.vercel.app` · health: `/api/health` → **ok:true** (DB connected in 960ms) · status: `/status`
