Poster-first home.
Search aur bhi wide.

Homepage ab titles ko posters ke through discover karata hai; search movies ke saath TV/web series bhi dhoondhta hai. Reviews pages alag se safe hain — homepage feed hata diya gaya.

Home discovery

Trending aur new-arrival rails me poster/title-year only. Review-feed cards aur poster scores nahi.

Animated search

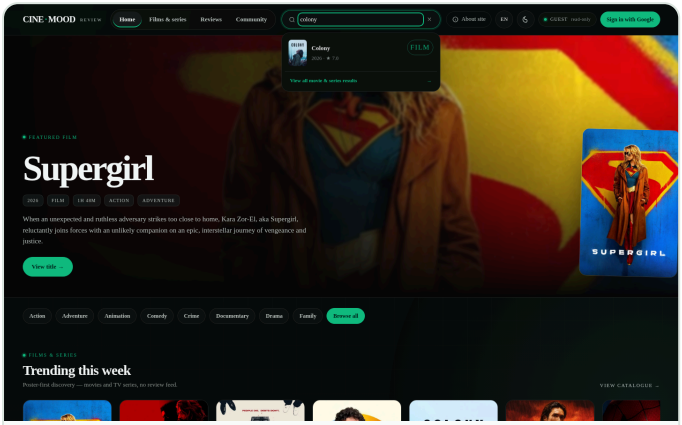

Debounced suggestions, keyboard navigation, calm empty/error state; catalogue + TMDB multi-search.

YouTube trailers

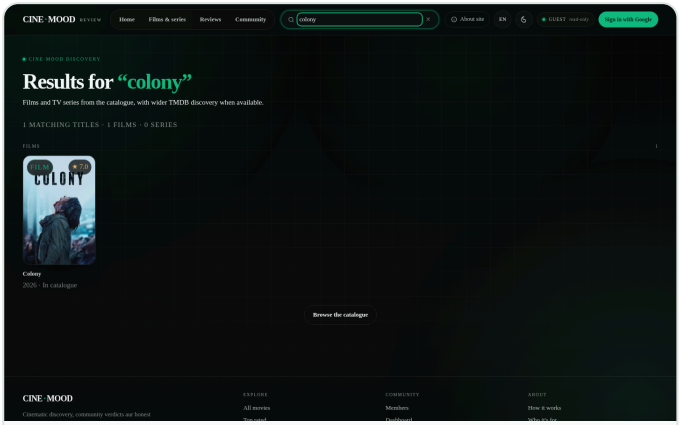

Primary “Watch trailer” YouTube par direct khulta hai. Optional “Play here” official iframe use karta hai.

Search flow: fast, clear, graceful

Type karte hi loading shimmer aur smoothly animated dropdown; result me Film/Series badge aur year. “View all” full results ko alag page par group karta hai.

Suggestions · keyboard selection + TV/film type badges

Full results · Films aur TV series grouped separately

- **TMDB scale-up:** server-side `/search/multi` se films + TV results; API key client tak nahi jaati.
- **Local + TMDB:** published catalogue pehle, phir duplicate-hata ke wider discovery; unavailable TMDB se local search crash nahi hota.
- **Admin import:** movie/TV type, TV cast/creator, episode runtime, series badge, aur title detail metadata handle hota hai.
- **Graceful fallback:** no match par helpful state; TMDB detail load na ho to temporary-unavailable message, fake 404 nahi.

> **Schema:** Supabase `Title.mediaType` additive column sync hua, default `movie`; existing 270 titles/reviews/users ko replace ya seed nahi kiya.

Checks pass — production status alag hai

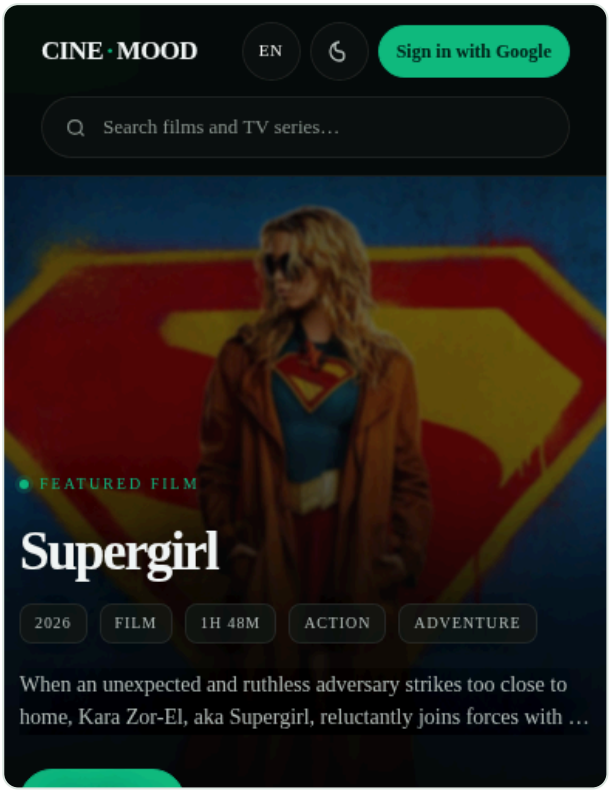

Prisma validate | TypeScript | Next.js build | Playwright desktop + mobile

- **Home:** 26 poster cards, 0 review cards, 0 score overlays. Poster-only setting verify ki.
- **Search:** `Colony` → HTTP 200 + one local result; no-match → HTTP 200 + empty array.
- **Failure test:** simulated search API 503 ke baad bhi calm “No match yet” state; console/page errors zero.
- **Responsive:** 390px mobile par search results no horizontal overflow; desktop 1440px bhi clean.
- **Data health:** 270 titles, 11 reviews, 2 users; health endpoint `ok:true`, schema present.

Local TMDB note: Production health me `TMDB_API_KEY` set report hua; local preview env me key absent thi, isliye external TMDB query yahan verify nahi hui. Existing key ko touch/replace nahi kiya.

Production: Round 17 production deploy confirm nahi hua. Last confirmed live release R15 (`bc6f1c2`) hai; local build/schema sync ko Vercel deploy nahi maana gaya.

YouTube API search key optional/unset hai. Saved trailer ID ho to direct YouTube link + embedded iframe dono available rahenge.

390px mobile preview · poster-first home + bottom navigation
