CINE·MOOD / ROUND 5

Admin, Data aur Scale wala round

Aaj kya ship hua, kya abhi live hai, aur aage kya karna hai — sab ek jagah, screenshots ke saath.

270
titles live

9
legacy reviews imported

0
fake users

100%
mobile responsive

Prepared for Harsh Upadhyay · 29 October 2026 · hindi + english (Hinglish)

01 **Data & catalogue**
02 **Admin panel**
03 **Google login**
04 **Security**
05 **Analytics & SEO**
06 **Mobile**
07 **Roadmap**

ROUND 5 · SUMMARY

Ek nazar mein: 10 kaam, 10 done

Sab kuch live build par test kiya gaya — desktop (1440×900) aur iPhone (390×844) dono par. Neeche har item ka status aur proof hai; detail pages aage.

01	**Admin panel solid + Google-only login**	Done
02	**Purane reviews import (legacy Vite app se)**	Done · 9
03	**Catalogue bharpoor**	Done · 270 titles
04	**Google auth wire-up + DB mein data**	Code done · keys baaki
05	**Zero fake / bot users**	Done · 0 users
06	**Analytics + SEO**	Done
07	**PDF plan with photos**	Ye document
08	**Guest mode (localStorage id, read-only)**	Done
09	**Rate limiting (admin + auth + writes)**	Done · DB-backed
10	**Desktop + mobile responsive**	Done · 0 overflow

Sirf ek cheez tumhare haath mein hai

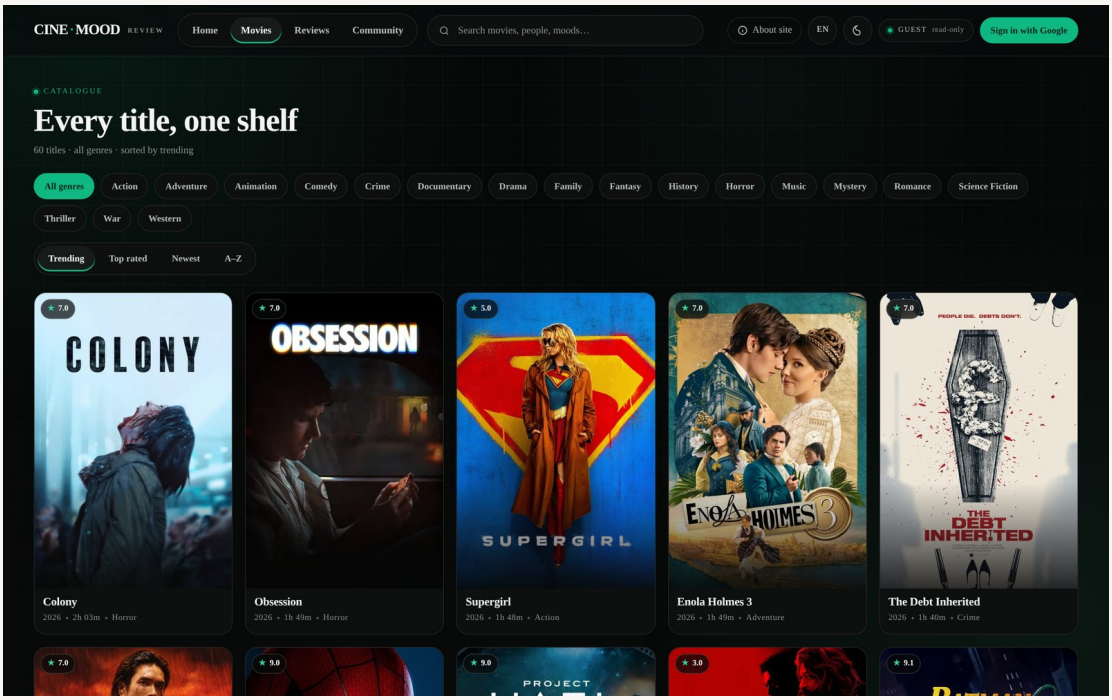

Google OAuth keys (Client ID + Secret) Google Cloud se banani padengi — 6 minute ka kaam. Uske baad login, review, like, comment sab live. Tab tak site guest mode mein perfectly chalti hai (reviews padhna free, likhna login ke baad).

Live URL: cinemood.vercel.app · **Repo:** github.com/Dev-Harshupadhyay/Cinenvood · **DB:** Supabase (schema `cinemood`)

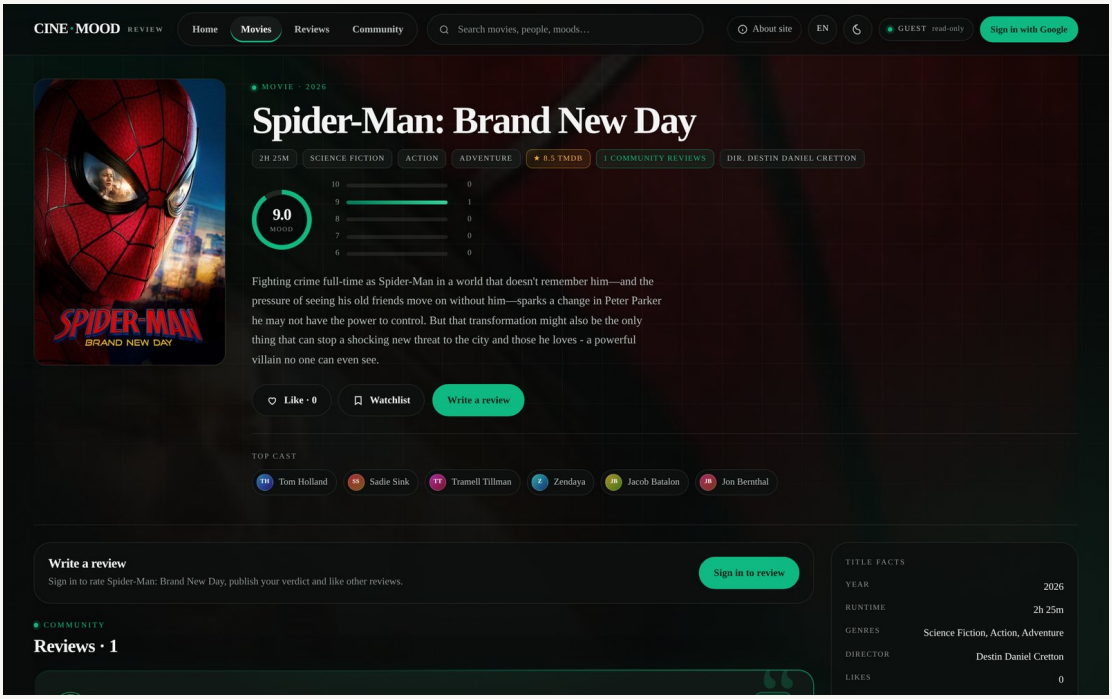

01 · DATA

Catalogue bharpoor, purana content safe

Pehle 14 titles the. Ab **270 real films** hain — TMDB metadata (poster, backdrop, cast, director, runtime, genres, TMDB score) ke saath, 1940s se 2026 tak. Purane **9 admin reviews** legacy app se import ho gaye, poori body, rating aur verdict ke saath.

Catalogue · genre filters, sorting, 270 titles, poster-first grid.

Title page · backdrop, score ring, cast, TMDB score aur editorial verdict — example: Spider-Man: Brand New Day.

01 · DATA (contd.)

Purane reviews kaise import hue (bina fake user banaye)

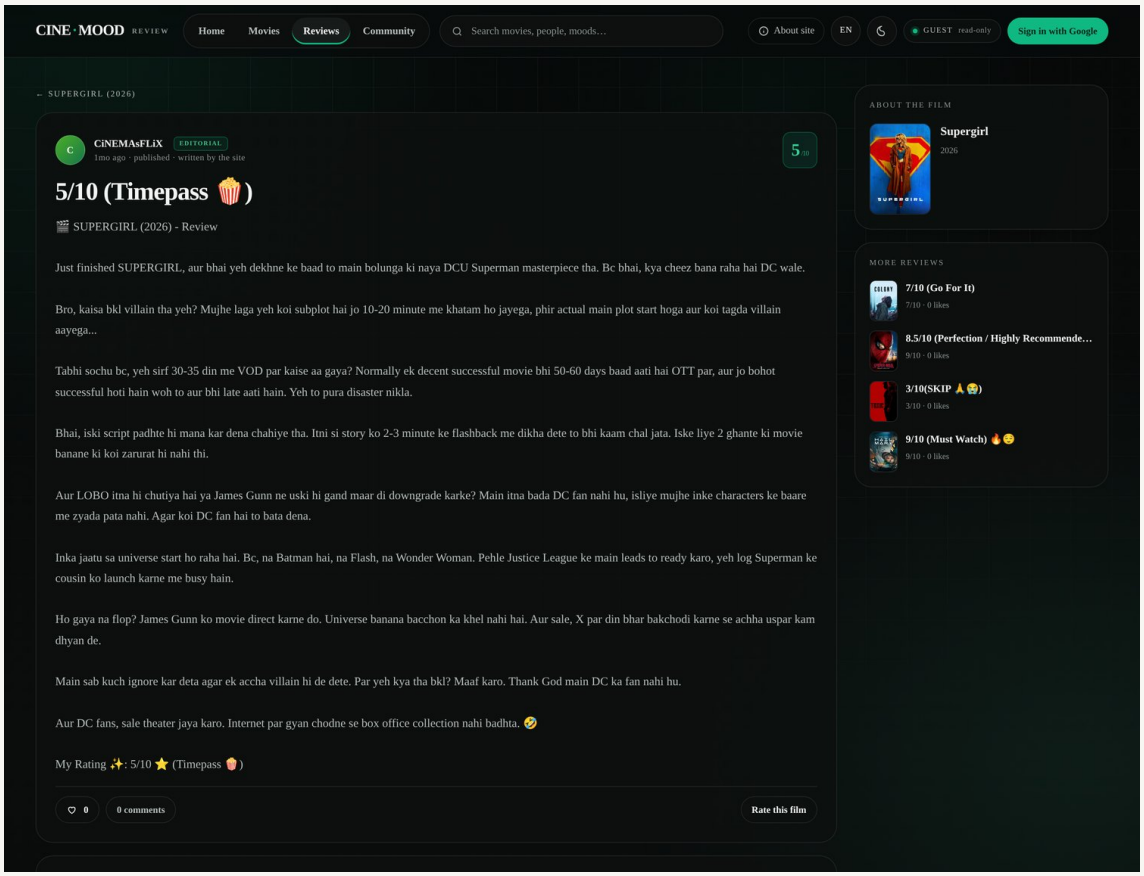

Legacy app ke reviews "CiNEMAsFLiX" naam se likhe the, lekin unka koi account nahi tha. Do raste the: (a) ek dummy account banao aur usko owner banao, ya (b) review ko **editorial** mark karo. Humne (b) chuna — kyunki tumne kaha tha ki site par ek bhi fake user nahi hona chahiye.

Cheez	Kya hua
Source	public.admin_reviews — 9 rows, Hinglish reviews (Colony, Obsession, Supergirl, Enola Holmes 3, The Debt Inherited, The Debt Collector, Spider-Man: Brand New Day, Project Hail Mary, Toxic).
Mapping	movie_id → TMDB id → Title (auto slug), rating verdict line se (3/10 se 9/10), published date original.
Byline	authorName = "CiNEMAsFLiX", editorial = true, userId = NULL. Card par **EDITORIAL VERDICT** badge + "— Harsh" signature.
Purana schema	public.* tables ko chhua nahi gaya — user_reviews, profiles, comments, likes sab wahi hain (backup ki tarah).
Legacy guest reviews	3 chhote test reviews ("Mast movie thi yaar") import nahi kiye — unke accounts map nahi hote, aur fake profile banana galat hota.

Import reproducible hai

`npm run db:import` — demo rows clear karta hai, catalogue + legacy reviews daalta hai, aur end mein counts print karta hai. Script: `prisma/import.mjs`.

Note: `public.*` ko kabhi truncate nahi karta — sirf `cinemood.*` schema reset hota hai.

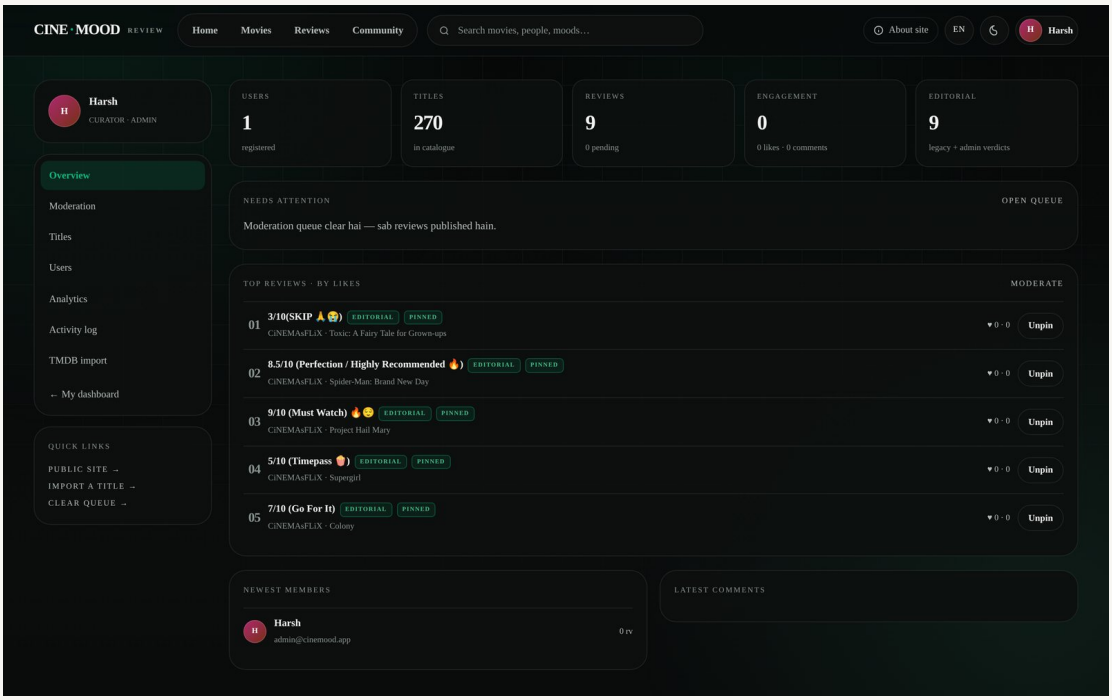

Legacy review live · CiNEMAsFLiX byline, EDITORIAL badge, full Hinglish body, 5/10 rating, comments + likes open.

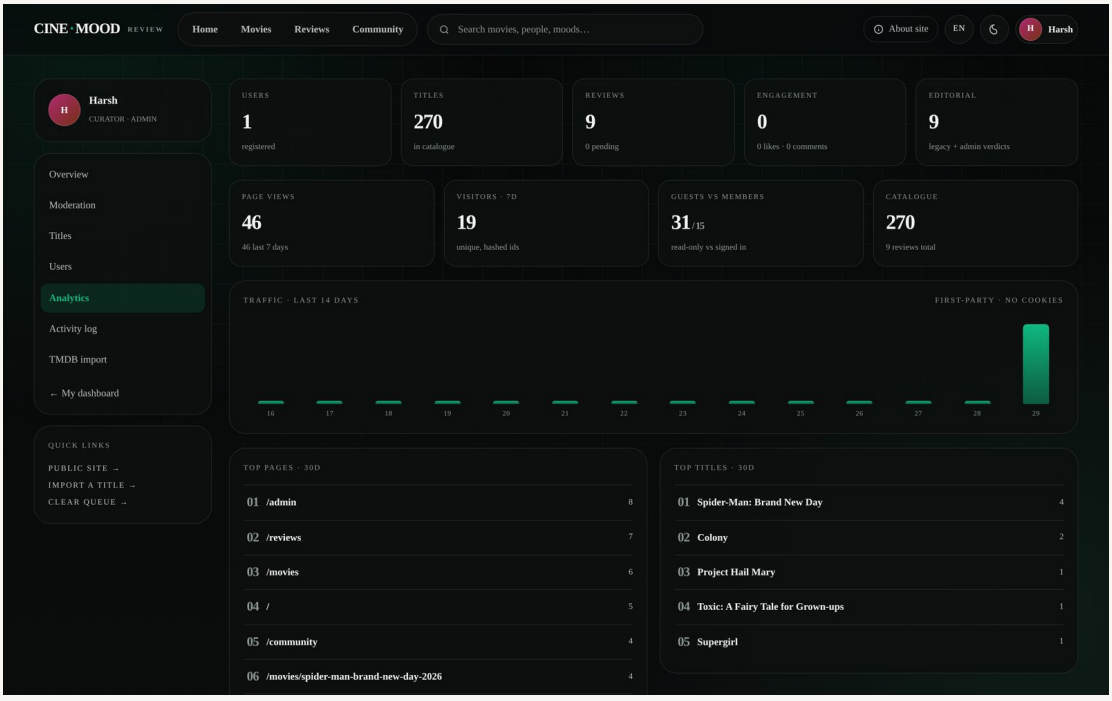

02 · ADMIN

Admin panel — ab poora control room

Pehle panel mein 5 tab the. Ab **7 tabs** hain: Overview, Moderation, Titles, Users, **Analytics**, **Activity log** aur TMDB import. Har mutation ka audit trail banta hai — kaun admin, kya action, kis id par, kab.

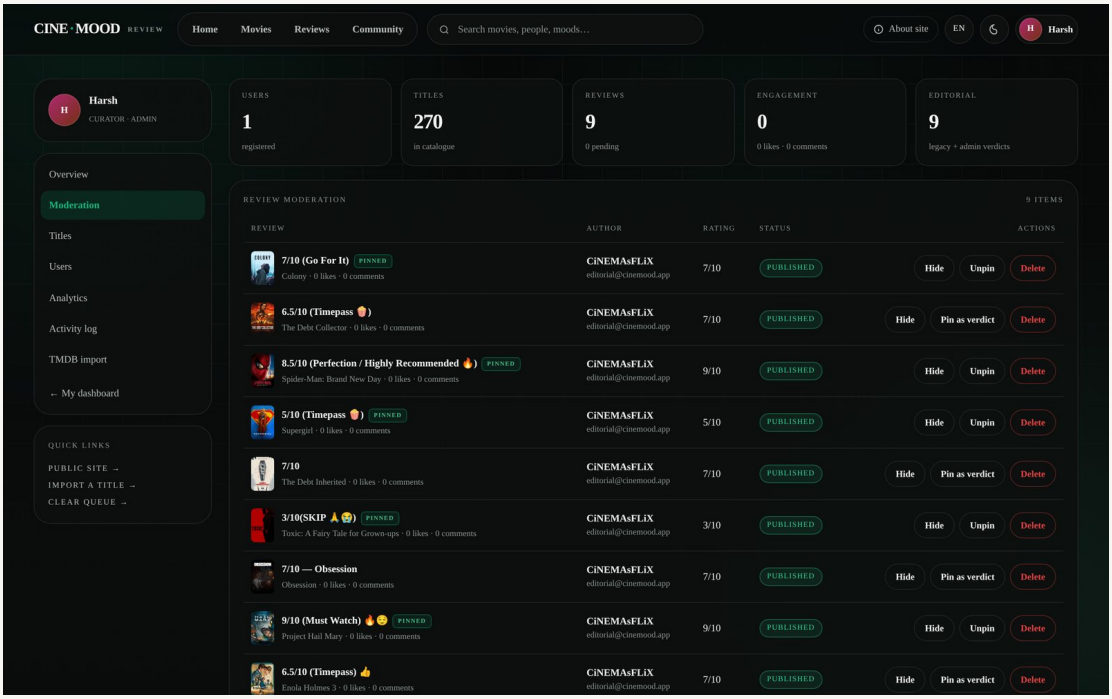

Overview · users, titles, reviews, engagement + pinned verdicts.

Analytics · 14-day traffic, top pages, top titles, devices, referrers, guests vs members.

02 · ADMIN (contd.)

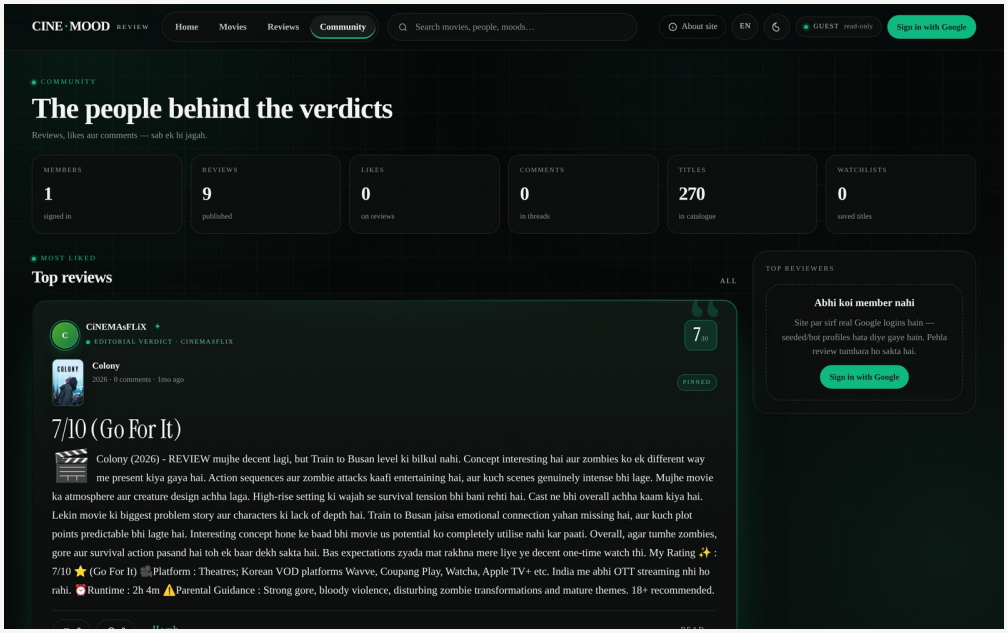

Moderation + activity log

Moderation · kis user ne kis movie par kya likha, likes/comments count, publish/hide/pin/delete.

Naya kya hai

- **Audit trail** — har admin action AdminLog mein: actor email, action, target, value, timestamp.
- **Analytics tab** — first-party page views (koi cookie nahi), top titles, devices, referrers.
- **Editorial count** — legacy verdicts alag se dikhte hain, community reviews se mix nahi hote.
- **Users tab** — role change + delete; apna role change karne par guard (khud ko demote nahi kar sakte).

Community · members, top reviewers aur stats. Zero users par bhi page toota nahi — clean empty state + sign-in CTA.

03 · ACCESS

Login ab sirf Google — aur admin bhi sirf ADMIN_EMAIL

Pehle login page par "admin@cinemood.app daalo" wala demo rasta tha. Wo hata diya. Production build mein sirf Google OAuth provider compile hota hai; local dev ke liye ek form hai jo production se bilkul bahar hai (NODE_ENV guard).

1 Google se sign in → 2 upsert User (name, email, photo) → 3 role = email == ADMIN_EMAIL ? ADMIN : USER → 4 requireAdmin() gate

Google OAuth — 6 steps (sirf ek baar)

1. console.cloud.google.com kholo → naya project banao: **CineMood**.
2. APIs & Services → OAuth consent screen → External → app name CINE·MOOD, support email tumhara Gmail, save.
3. Credentials → Create credentials → OAuth client ID → type **Web application**.
4. Authorised JavaScript origins: `https://cinemood.vercel.app` aur `http://localhost:3000`.
5. Authorised redirect URI (exact): `https://cinemood.vercel.app/api/auth/callback/google` + `http://localhost:3000/api/auth/callback/google`.
6. Client ID + Secret copy karo → Vercel env mein `AUTH_GOOGLE_ID` / `AUTH_GOOGLE_SECRET` → redeploy.

Admin ka ek hi rule

`ADMIN_EMAIL` ko apne asli Gmail par set karo, warna admin panel 403 dega. Site khud batati hai: "Tum is email se login ho, admin email ye hai" — guessing nahi karni padegi. Ye env badalne ke baad **Redeploy (build cache unchecked)** zaroori hai.

Vercel environment variables

Settings → Environment Variables. Plain lines, **no quotes, no commas, no trailing spaces**. Har var Production + Preview dono par tick karo, phir Deployments → Redeploy (build cache unchecked).

Key	Value	
DATABASE_URL	postgresql://postgres.:@aws-1-ap-southeast-1.pooler.supabase.com:6543/postgres?schema=cinemood&pgbouncer;=true&connection;_limit=10&sslmode;=require	required
DIRECT_URL	same host, port 5432, ?schema=cinemood&sslmode;=require	required
AUTH_SECRET	random 32-byte base64 (already generated)	required
AUTH_TRUST_HOST	true	required
NEXT_PUBLIC_SITE_URL	https://cinemood.vercel.app	required
ADMIN_EMAIL	tumhara asli Gmail (admin isi se banega)	required
AUTH_GOOGLE_ID	Google Cloud → OAuth client ID	new
AUTH_GOOGLE_SECRET	Google Cloud → client secret	new

TMDB_API_KEY pehle se set hai — usko overwrite mat karna. Poore plain-text block ke liye workspace mein `.env.vercel-copy.txt` hai (repo mein password kabhi commit nahi hota).

04 · SECURITY

Rate limiting — koi bypass nahi

Do layers: pehle har instance ki memory (burst rokne ke liye), phir Postgres mein shared counter (taaki dusra lambda/host bypass na kar sake). Har limit ek hi jagah define hai — `lib/rate-limit.ts`.

Surface	Limit	Key
Admin page views	120 / min	IP + account
Admin actions	60 / min · 600 / hour	admin user
Google sign-in attempts	30 / 10 min	IP
New / edited reviews	6 / 15 min	user
Comments	10 / 10 min	user
Likes	45 / min	user
Analytics beacons	200 / min	IP
Bots / preview crawlers	blocked	user-agent

Live test: 30 sign-in attempts ke baad 31st request par **429** + Retry-After header. Admin page 121st hit par clean "Thoda ruk jao" screen (soft crash nahi).

Guest mode — padhne ke liye login nahi chahiye

- Sign-out visitor ka id `localStorage["cm-guest-id"]` mein rehta hai — server par koi user row nahi banti.
- Header mein **GUEST · read-only** chip; like / review / comment par "Sign in to continue" gate.
- Analytics ke liye guest id hash hota hai (SHA-256) — raw id DB mein nahi jaata.
- Guests ko sirf published content dikhta hai; koi PII store nahi hoti.

05 · GROWTH

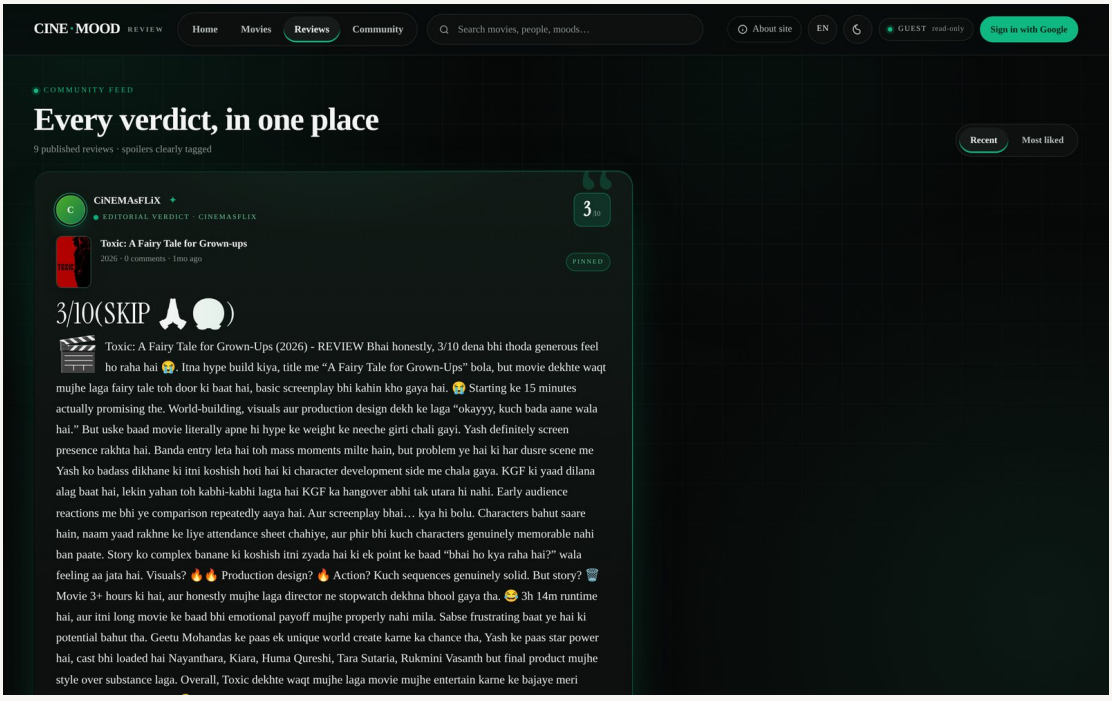

Analytics aur SEO — dono apne control mein

Analytics (first-party)

Har page view ek beacon se `/api/track` par jaata hai → `cinemood.PageView` table. Koi cookie, koi third-party script, koi consent banner ki zaroorat nahi. Admin → Analytics tab mein 14-day chart, top pages, top titles, devices aur referrers. Vercel Analytics bhi laga hua hai (production par edge-level numbers).

SEO

Layer	Kya kiya
Metadata	Har page ka title/description + canonical; movie aur review pages par OpenGraph images (poster).
Structured data	JSON-LD: WebSite + SearchAction, Organization, Movie (aggregateRating sirf real reviews se), Review, BreadcrumbList.
Sitemap	Dynamic /sitemap.xml — 270 titles + 9 reviews + static routes, runtime par DB se banta hai.
Robots	Private routes (/admin, /dashboard, /api) disallow; sitemap reference.
Performance	First Load JS ~107 kB, images lazy, poster relay /api/img se (TMDB key server par).

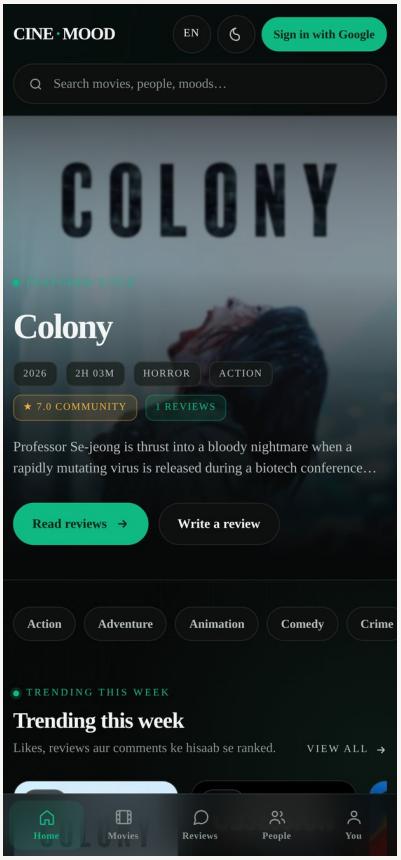

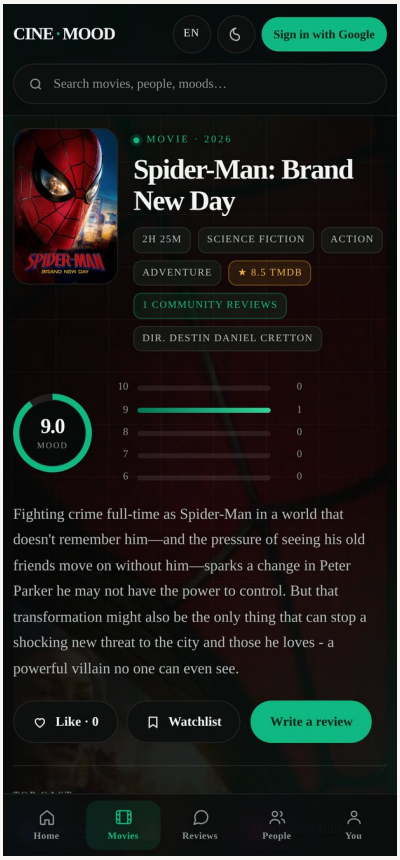

Reviews feed · editorial verdicts + community, har card par likes aur comments.

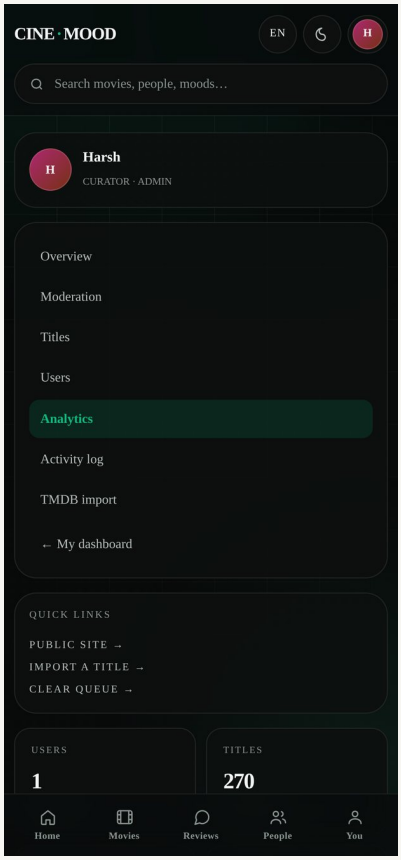

06 · RESPONSIVE

Mobile par app jaisa feel — aur ek bhi layout break nahi

Mobile par desktop ka nav pill hide hota tha (users kho jaate the). Ab neeche **5-tab app bar** hai: Home · Movies · Reviews · People · You — safe-area padding ke saath. Genre chips ab horizontal scroll karte hain, tables scroll container mein hain, aur hero par scrim strong hai taaki text readable rahe.

iPhone 13 (390×844) · home, title page, admin analytics. Horizontal overflow: **0 px** on /, /movies, /reviews, /community, /admin.

Breakpoint	Behaviour
≤ 900 px	Bottom tab bar, nav pill hidden, search full-width, hero poster hidden, guest chip compact.
≤ 700 px	Chip rails scroll, title hero 2-row grid (poster + intro, body full width).
≤ 560 px	Guest chip hidden, tables 12.5px with horizontal scroll, sparkline labels off, tighter panels.
Light theme	Real light mode preserved — backdrops lighter, accents dark-green for contrast (WCAG-friendly).

Mobile par jo toota tha, aur kaise fix hua

Issue	Fix
Navigation gayab	≤900px par desktop nav hide tha aur koi replacement nahi — users sirf logo par click kar sakte the. Ab 5-tab bottom bar.
Hero text padhna mushkil	Backdrop bright hone par white title blend ho raha tha. Gradient scrim + text-shadow add kiya.

Issue	Fix
Genre chips 3-4 rows	Har chip alag row le raha tha. Ab horizontal scroll rail (scrollbar hidden).
Tables screen se bahar	Admin tables page ko chauda kar rahe the. Ab contained scroll + mobile font size.
Bottom bar content dhak raha tha	Fixed bar ke liye body padding-bottom + safe-area inset.

07 · ROADMAP

Aage kya — 4 buckets

Kab	Kya
Aaj (done)	Catalogue 270 · legacy 9 reviews · zero fake users · Google-only auth · admin analytics + audit log · rate limits · guest mode · SEO/JSON-LD · mobile app bar.
Is hafte (tum)	Google Cloud se Client ID + Secret banao → Vercel env (6 + 2 naye) → ADMIN_EMAIL ko apne Gmail par set karo → redeploy. Uske baad apna pehla review likho — real account se.
Agle 7 din (main)	OMDb key add hoke IMDb/RT/Metascore enrich on · Supabase password rotate · 3-4 featured titles ke liye hand-written editorial verdicts · search ko title+cast+director par rank karna.
Agle 30 din	Watchlist page + “continue watching” vibe · user profile pages (public) · weekly “Top 10 this week” auto-generated from likes · email digest (Resend free tier) · TMDB proxy worker (ISP-safe).
Agle 90 din	Hindi/Hinglish review body translation toggle · image CDN + ISR for catalogue · moderation ML keywords (spam/abuse) · mobile PWA install prompt · creator accounts (studio verdicts).

Metrics jo dekhne hain (admin → Analytics)

Signal	Kya matlab
Guests vs members	Agar 90% guest hai to sign-in CTA par kaam karo, content par nahi.
Top titles	Kaunsi film traffic laa rahi hai — uspar editorial verdict pehle likho.
Devices	Mobile 70%+ hai to mobile-only polish priority.
Referrers	Google se aane wala traffic = SEO kaam kar raha hai.

Sabse zaroori baat

Site live hai, data real hai, users zero hain — ye deliberately hai. Jab tumhara Google login aayega, pehla account tumhara hoga aur pehla ADMIN bhi. Uske baad hi community count badhega. Koi seeded profile, koi bot review, koi fake like nahi.
