CINEVOOD / PRODUCT GUIDE

Movies, reviews, and community.

A practical guide to the public movie website and its administrator control room.

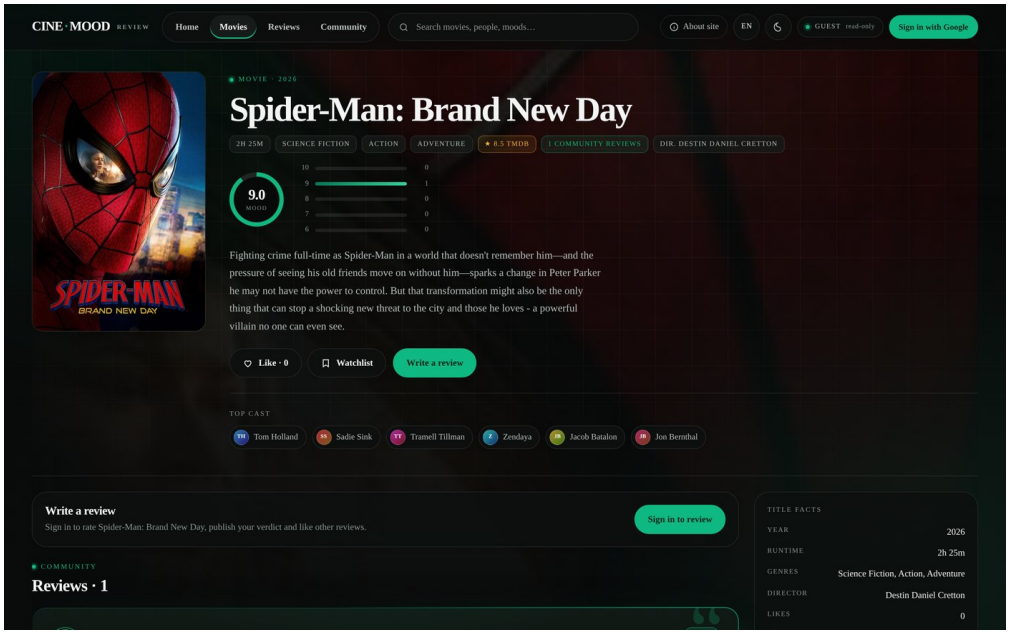

Public homepage — title discovery, featured content, genre shortcuts, and trending titles. Example catalogue values may vary.

01 / PUBLIC WEBSITE

A focused home for film discovery

Cinevood combines a browsable film-and-series catalogue with community reviews. Visitors can explore without signing in; member actions are available after authentication.

Movie detail layout — poster, title information, rating context, cast, review entry point, and community area. Example title data is illustrative.

What visitors can do

- **Discover titles:** browse the home page, catalogue, genre filters, search suggestions, and search results.
- **Open a title page:** view poster, year, synopsis, genres, runtime, director, cast, ratings, and related titles where available.
- **Find a trailer:** use the in-page trailer search and playback when an embeddable match is available; an external YouTube search is offered when no match is found.
- **Read and contribute:** explore community reviews, ratings, and comments; signed-in members can write reviews and use title actions such as likes and watchlists.

Browsing stays accessible to guests. Signing in unlocks member participation; the website keeps editorial and community ratings distinct.

02 / MEMBER EXPERIENCE

From browsing to participation

The public site is organized around a simple path: discover a title, inspect its details, then join the conversation if you choose.

STEP	ACTION	WHAT HAPPENS
1	**Find a title**	Use search, catalogue filters, trending sections, or a featured title on the home page.
2	**Explore the detail page**	Review the available metadata, cast, ratings, trailer links, and existing reviews.
3	**Sign in to participate**	Member sign-in enables review and rating actions, likes, comments, and personal title lists.
4	**Return to your dashboard**	Members can revisit their activity and saved titles from the account area.

Community features

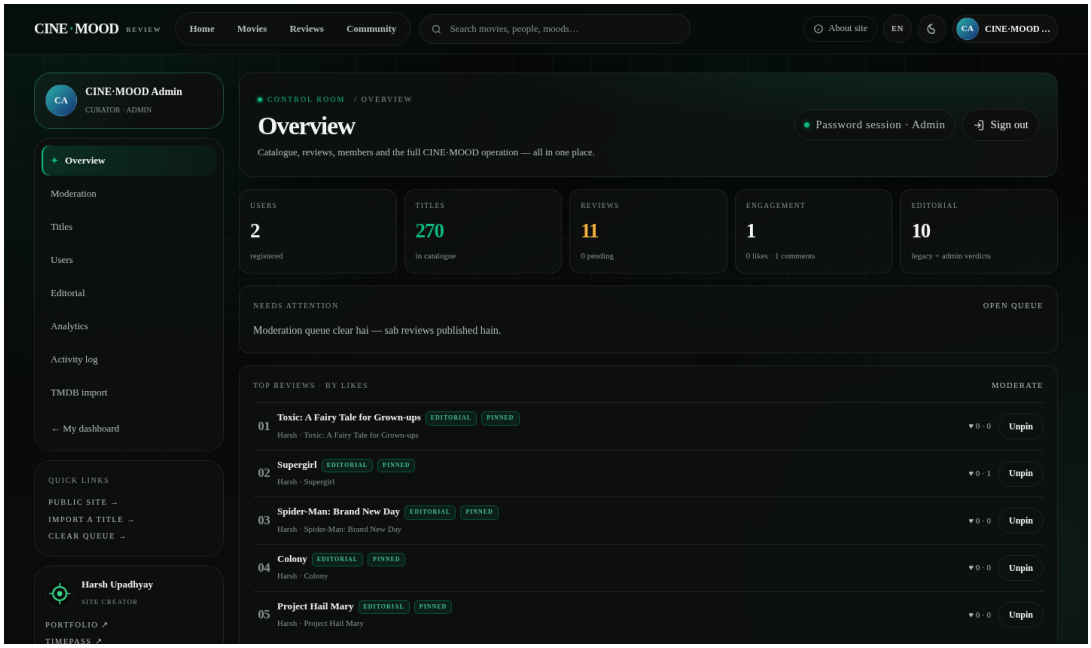

- Reviews pair a written opinion with a member rating; reactions and comments help readers find useful perspectives.
- The watchlist gives members a place to keep titles they want to revisit.
- The interface supports English and Hinglish editions, plus light/dark appearance settings.

Editorial reviews are presented separately from member-generated reviews. Visitors should treat external trailer matches and third-party metadata as reference information.

03 / ADMIN PANEL

A protected control room

The administrator area is a separate, access-controlled workspace for maintaining the catalogue, reviewing community submissions, and monitoring site activity. Admins sign in through the dedicated admin login; ordinary member access does not unlock administrative tools.

Admin overview — snapshot counters, moderation status, and quick access to common tasks. Values shown are from an example screen.

AREA	PURPOSE
Overview	See headline counts for members, titles, reviews, engagement, and editorial content; review recent activity and top reviews.
Moderation	Inspect submitted reviews, publish or hide them, pin a review as a featured verdict, or remove it.
Titles	Manage title visibility and featured placement; maintain English and Hindi trailer IDs or URLs.
Users	Review member accounts and roles; promote, demote, or remove an account when appropriate.
Editorial	Create and maintain editorial reviews and verdicts.
Analytics / Activity	Review traffic and engagement summaries and the latest recorded administrator actions.
TMDB import	Search for and import title metadata into the catalogue.

Keep the catalogue healthy

Use the admin tabs as a small editorial operations desk. These repeatable workflows keep public information current and community content well managed.

Import or refresh a title

- Open **TMDB import**, search for the film or series, review the match, and import the intended record.
- Open **Titles** to confirm the title is visible, adjust featured placement, or hide it if it should not appear publicly.

Find and save a trailer

- In the title row, use **Search YouTube API** to retrieve English and Hindi candidates when automatic search is configured.
- Check the uploader and title before selecting a candidate. Search results are suggestions, not a verification of ownership or official status.
- If the API returns no usable match, open the manual YouTube search link and paste a suitable video URL or ID into the appropriate field, then save.

Review community submissions

- Open **Moderation** and check the review, author, rating, and title context.
- Publish or hide a review, pin a useful verdict, or delete content that should be removed. Confirm destructive actions before proceeding.

Editorial work

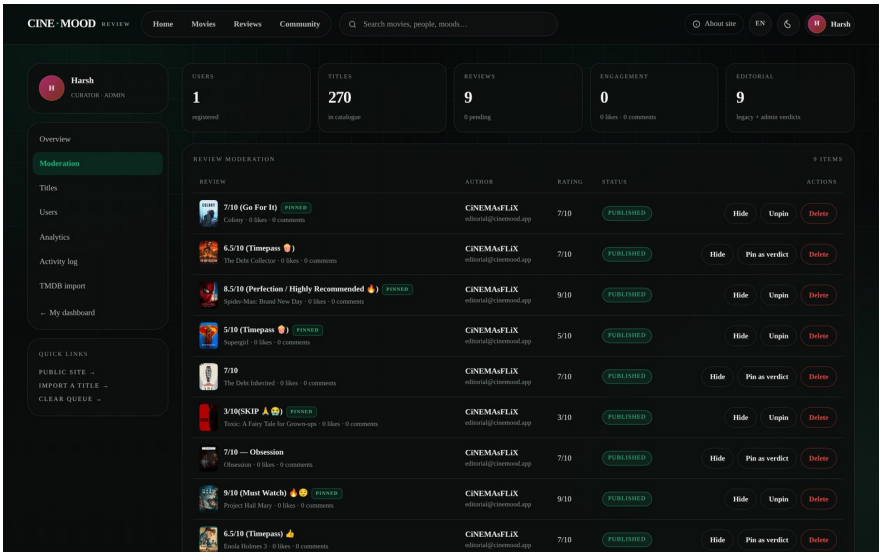

- Use **Editorial** for site-authored reviews. Keep editorial opinions clearly separate from community ratings and member reviews.

Trailer discovery requires the site’s YouTube Data API integration. A direct YouTube search remains available as a manual fallback.

05 / ADMIN OPERATIONS

Monitor, review, and protect

The control room includes reporting and an audit view so administrators can understand how the site is being used and what actions were taken.

Moderation table example — review status and available administrator actions.

A practical operating checklist

- **Start with Overview:** check pending submissions and high-level engagement counts.
- **Moderate consistently:** review content before publication according to the site's community standards.
- **Verify catalogue edits:** confirm the correct title, year, poster, and trailer before making it prominent.
- **Use least privilege:** grant administrator access only to trusted operators and remove access when it is no longer needed.
- **Protect credentials:** keep admin passwords and service/API credentials private; never enter them into public review or title fields.
- **Check Activity:** use the audit view to confirm recent administrator actions when investigating a change.

This guide describes the public movie website and its admin panel. Screenshots are representative interface examples; live content, counts, and available metadata can change.
