CINE·MOOD
REVIEW · RATE · DISCUSS

Jo bana hai — achhe se, ek PDF mein

cinenvood jaisi premium website — lekin pirate site nahi, ek full review + community platform. Live chalti hai, admin panel se sab control hota hai.

LIVE PREVIEW · HOME PAGE · DARK THEME

14	23	7	9	13

01 · EK LINE MEIN

Ye kya hai — aur kya nahi

Aapne kaha tha: cinenvood.vercel.app jaisi "same to same" premium site chahiye, lekin pirate site nahi. To wahi visual language — dark cinematic canvas, poster rails, match-score chips, glass panels — uthaya gaya aur uske upar ek legit review platform khada kiya gaya: films ka data TMDB se, verdict community se, control admin ke haath mein.

Reference site (cinenvood)	Jo banaya (CINE·MOOD)
Pirated movie/TV content, download links	Sirf metadata + reviews, koi file nahi
Password-protected admin, reviews on Supabase	Google / demo login, Prisma + SQLite→Postgres
Koi rating/comment system nahi	10-point ratings, spoiler-safe reviews, likes, comments
Dark-only, poster grid	Dark + light, 5 accent themes, responsive mobile-first
No dashboard for users	Member dashboard: reviews, watchlist, profile
Generic admin list	Admin: moderation, catalogue, users, TMDB one-click import

Ek line ka pitch: "Letterboxd jaisa review platform, streaming site jaisi feel." — log film dekhte hain, yahan aakar rating + review dete hain, watchlist banate hain, aur baaki logon ke verdicts padhte hain.

KYA KYA CHALTA HAI

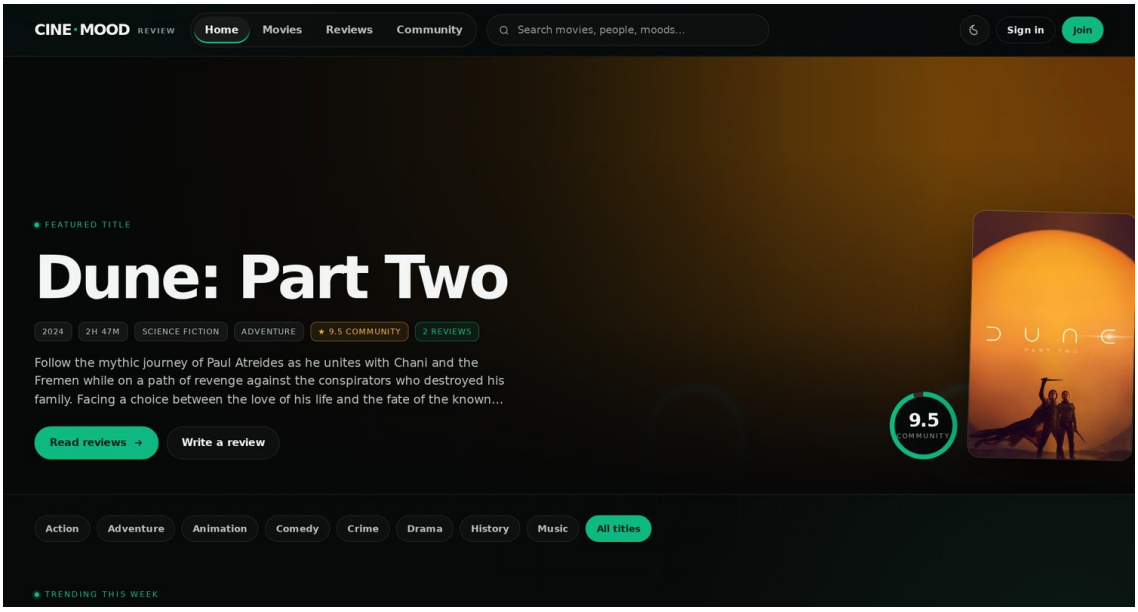

Features jo actually kaam karte hain

- Instant search — title, synopsis aur director par (header mein live dropdown)
- Review composer — 10-star picker, headline, body, spoiler toggle; ek user ek film par ek review (upsert)
- Spoiler blur — spoiler wale reviews "click to reveal" ke peeche hidden
- Likes + comments — review par like, review page par poora comment thread
- Like + Watchlist — har film par, dashboard ke watchlist tab mein dikhta hai
- Filters — genre, sort (trending / rating / newest / title)
- Dashboard — stats, my reviews, watchlist, editable profile
- Admin — moderation queue, catalogue, users, comments, TMDB import
- SEO/PWA — sitemap, robots, OG image, manifest, JSON-LD per film

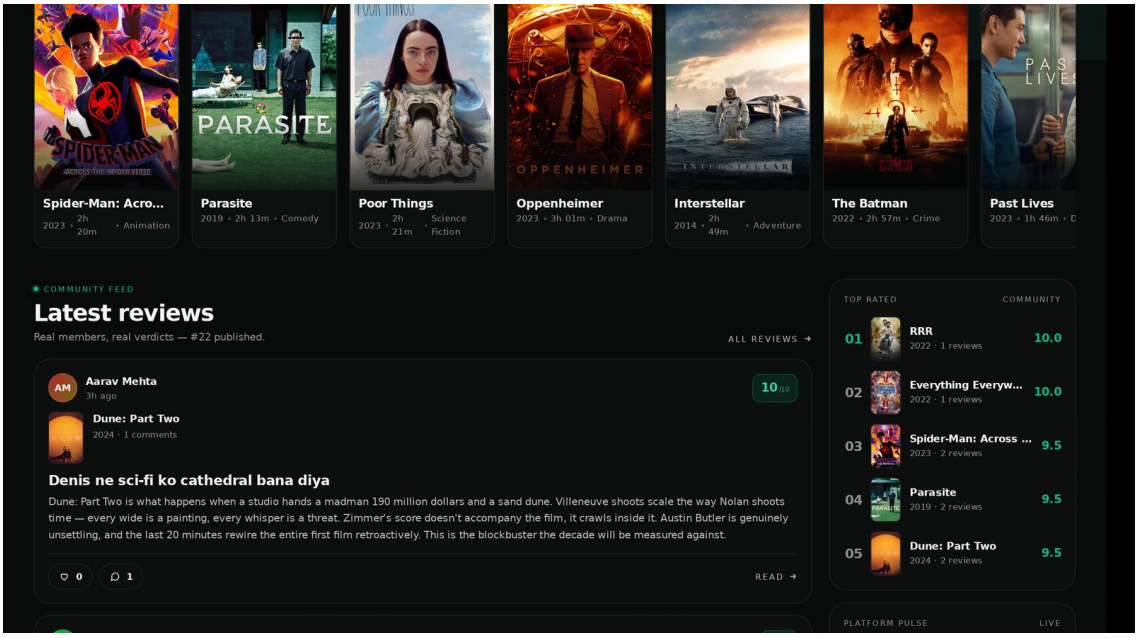

02 · PUBLIC SITE

Home — hero, rails, feed

Featured film ka backdrop poore width mein, poster card tilt ke saath, community score ring, genre chips, trending rail, review feed aur right side mein top-rated / community pulse / top reviewers.

Home · hero + featured poster + genre chips (dark theme, default)

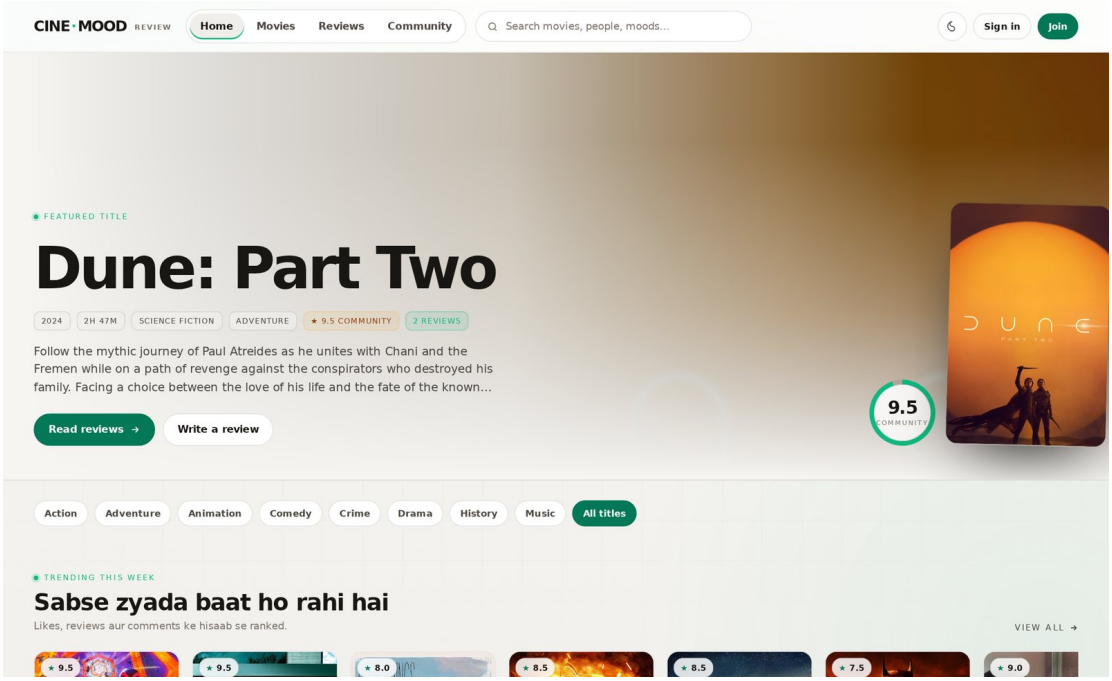

Trending rail ke neeche review feed, aur sidebar mein top rated / community pulse

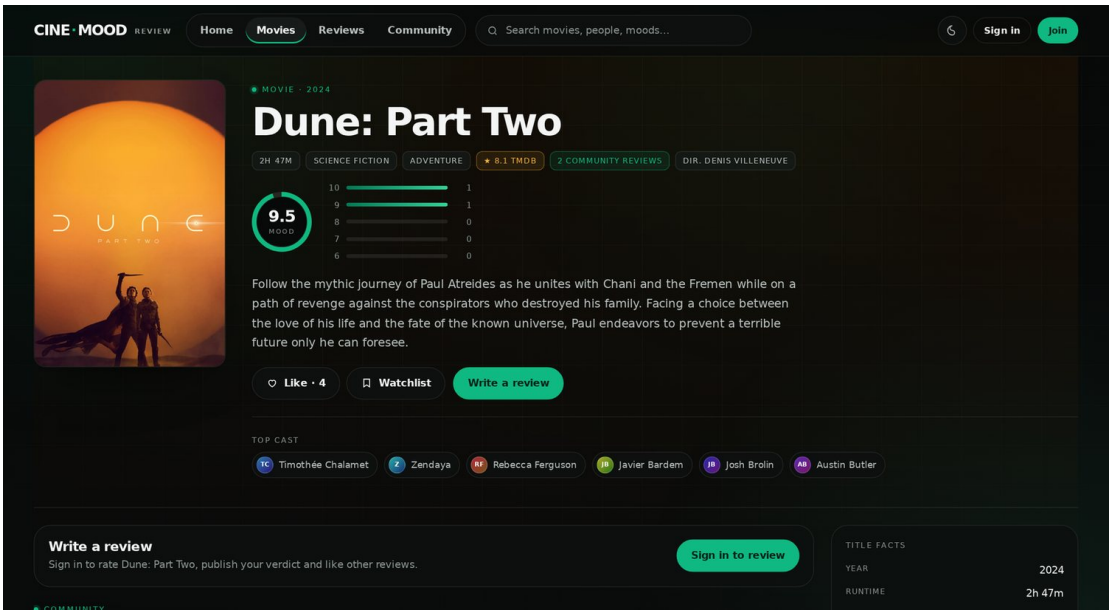

02 · PUBLIC SITE (CONTD.)

Light mode + film page

Sirf dark nahi — ek asli light theme bhi hai (sirf colors invert nahi kiya, poore tokens dobara tune kiye). Theme switcher header mein hai aur user ki choice localStorage mein yaad rehti hai.

Same home page, light theme — tokens dobara tune kiye, sirf invert nahi

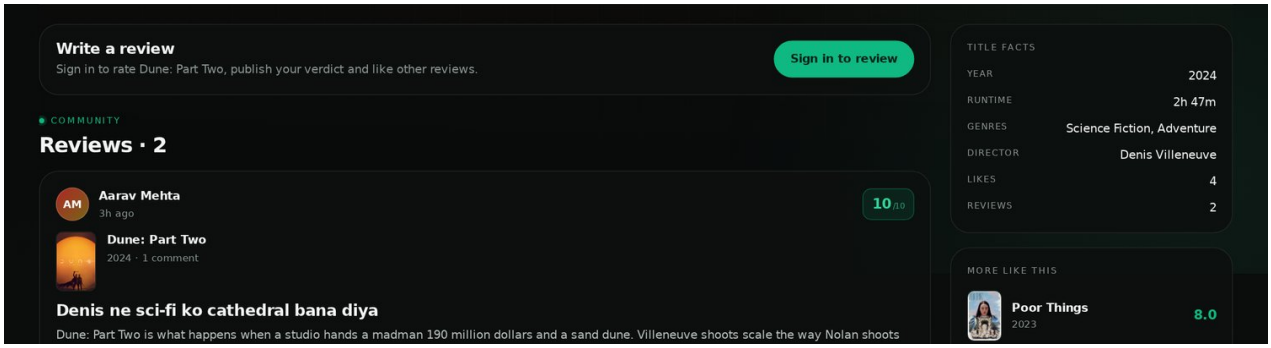

Film page · poster, TMDB rating, community score ring, 10→6 distribution, Like/Watchlist

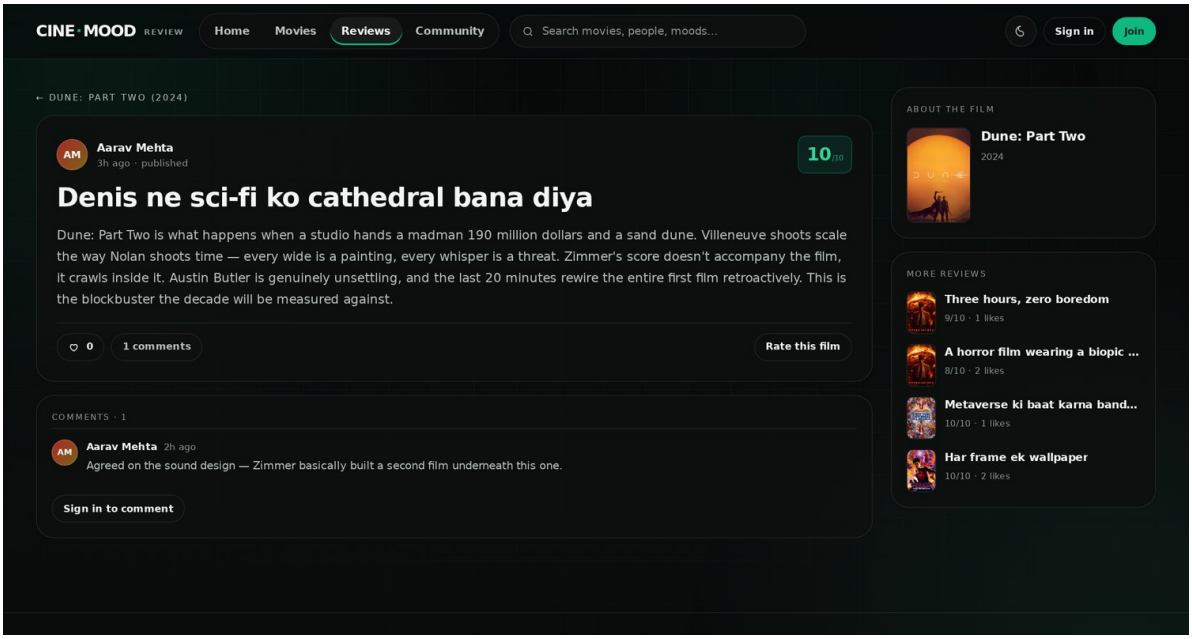

03 · FILM PAGE

Composer aur community section

Usi page ke neeche review composer hai — 10-star picker, headline, review body aur spoiler checkbox. Publish karte hi rating distribution aur community score update ho jaate hain. Uske baad community reviews aur similar titles.

Composer entry + film facts sidebar · sign-in state (logged out)

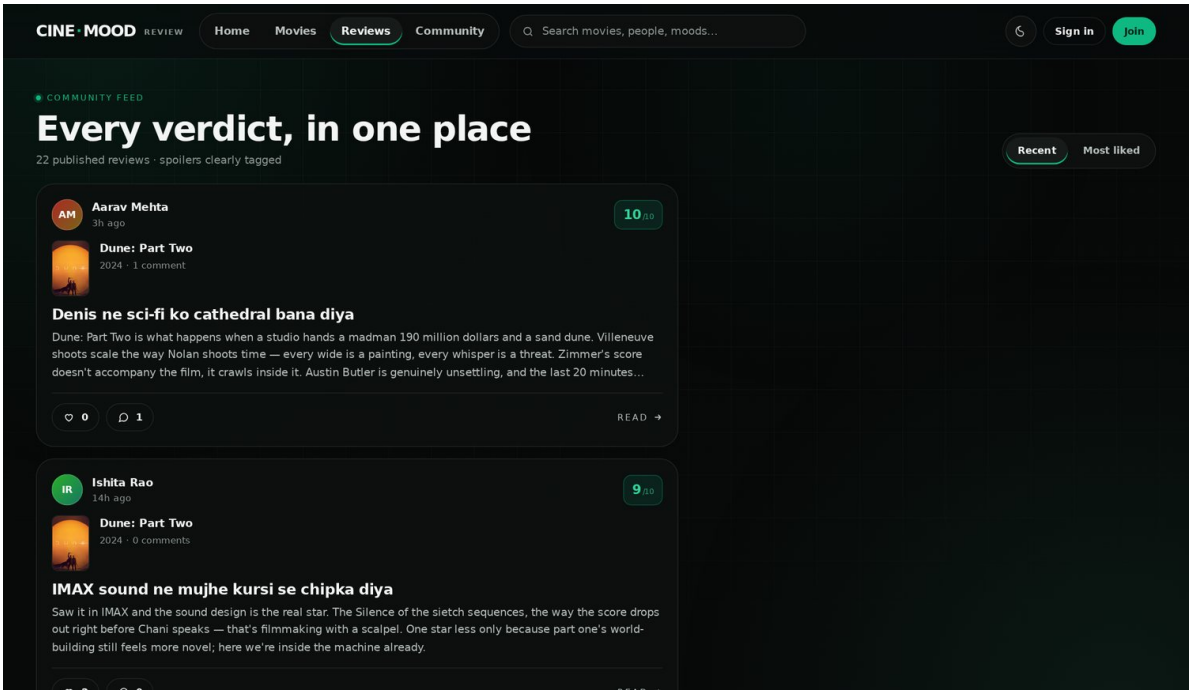

Review page · spoiler-safe body, like, comments thread aur "rate this film"

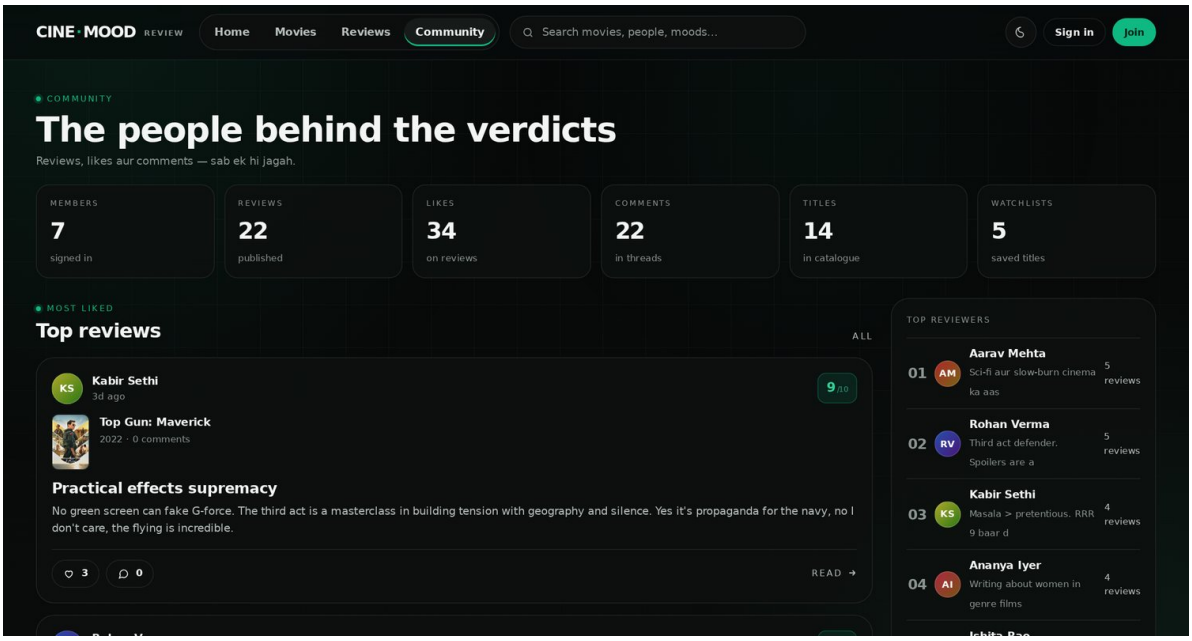

04 · COMMUNITY

Community aur login

Community page par top reviewers ka leaderboard, naye members aur active discussions. Login page par Google button (credentials aate hi live ho jaata hai) aur neeche demo email login — demo ke liye.

Reviews feed · recent / top sorting, likes aur comment counts

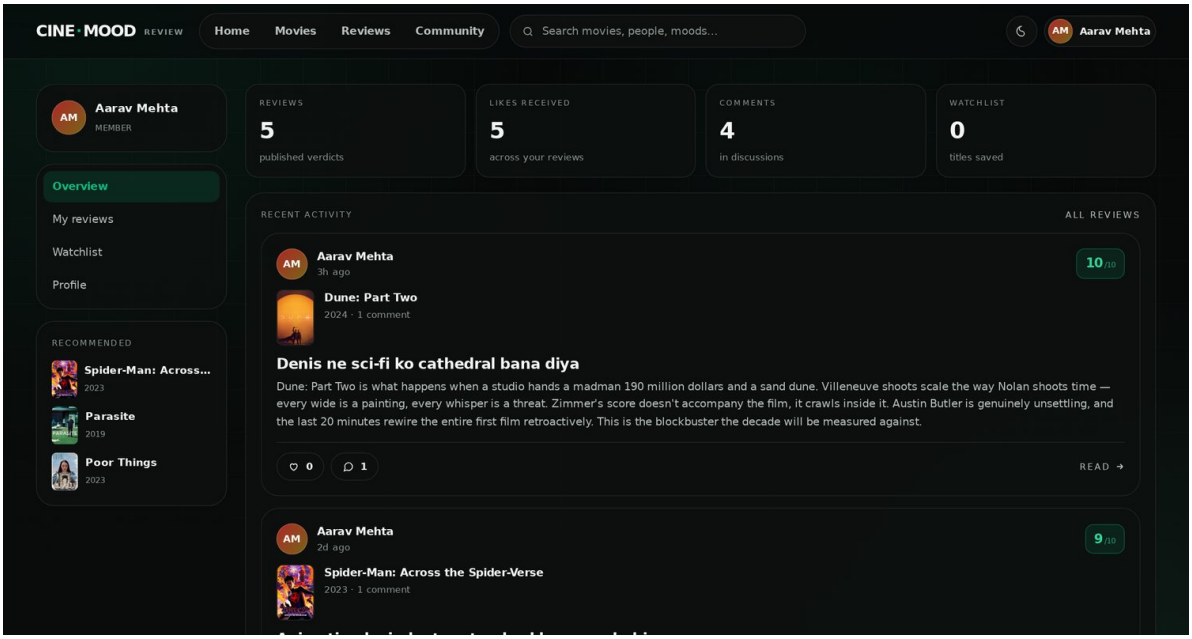

Community · top reviewers leaderboard, newest members, active discussions

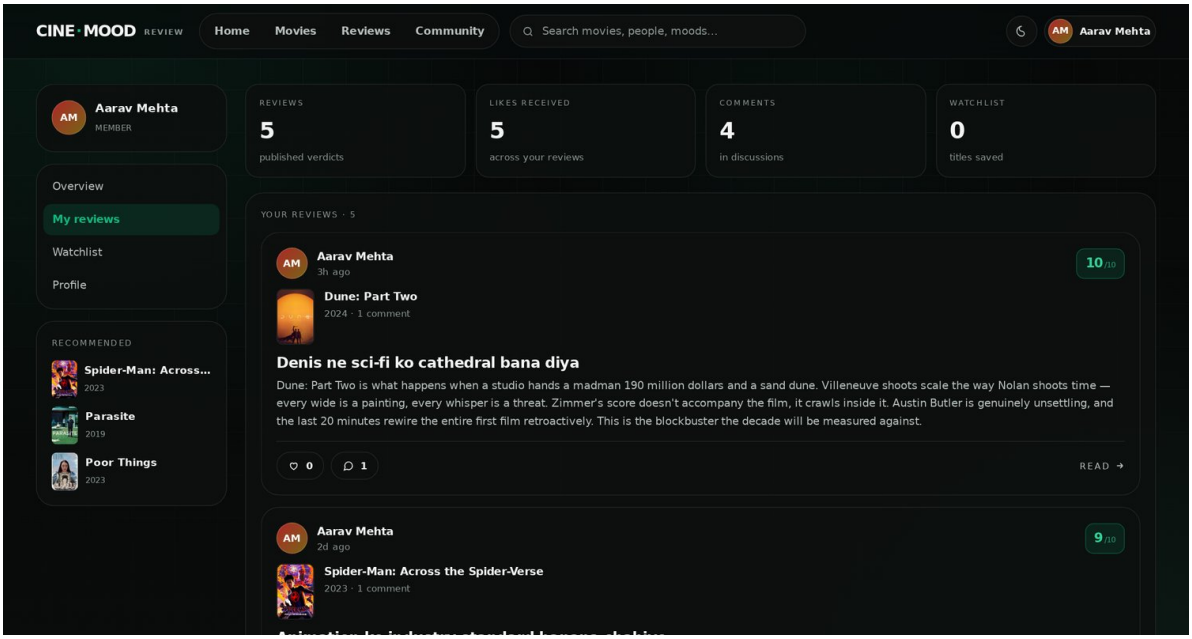

05 · MEMBER AREA

Dashboard — user ka apna ghar

Login ke baad har member ko stats milte hain (reviews, likes received, comments, watchlist), uske apne reviews, saved watchlist aur editable profile — bilkul app jaisa.

Dashboard overview · stats (reviews, likes received, comments, watchlist) + recent activity

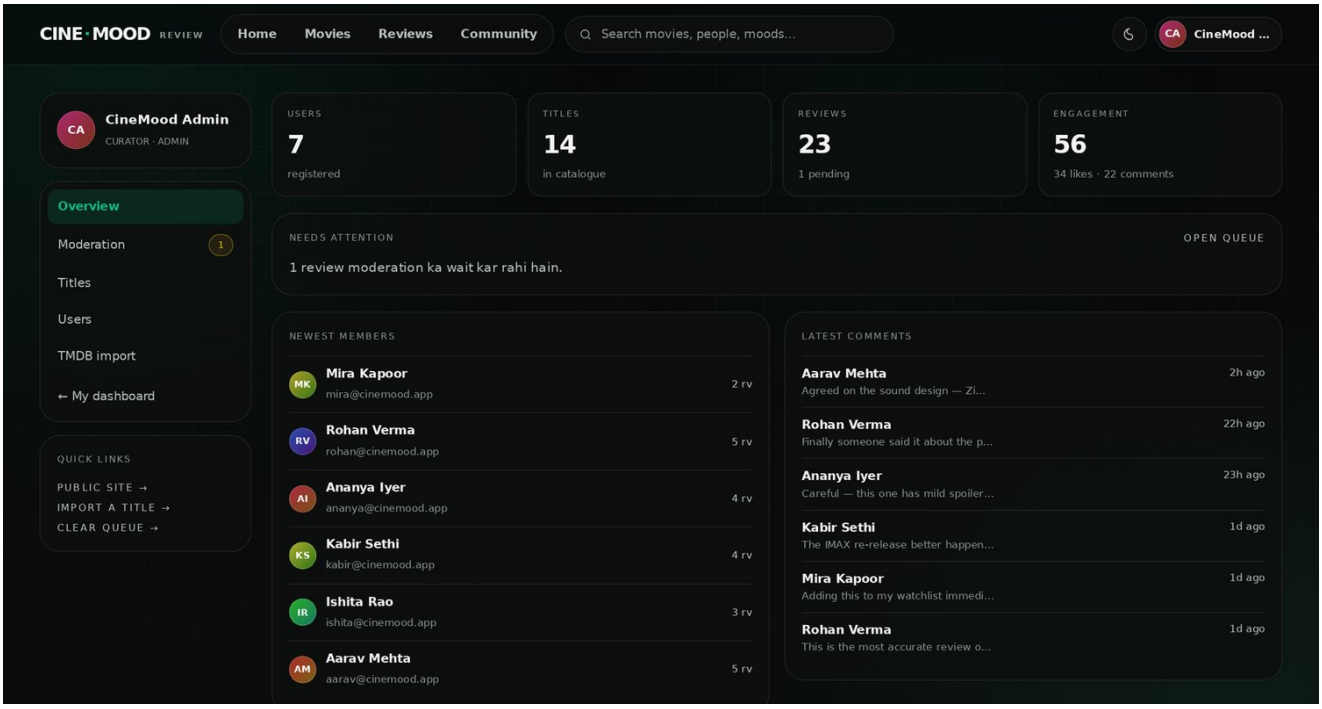

My reviews tab · har review ka rating, likes, comments aur READ link

Profile tab: naam aur bio edit → header dropdown, review cards aur community page par turant reflect hota hai.

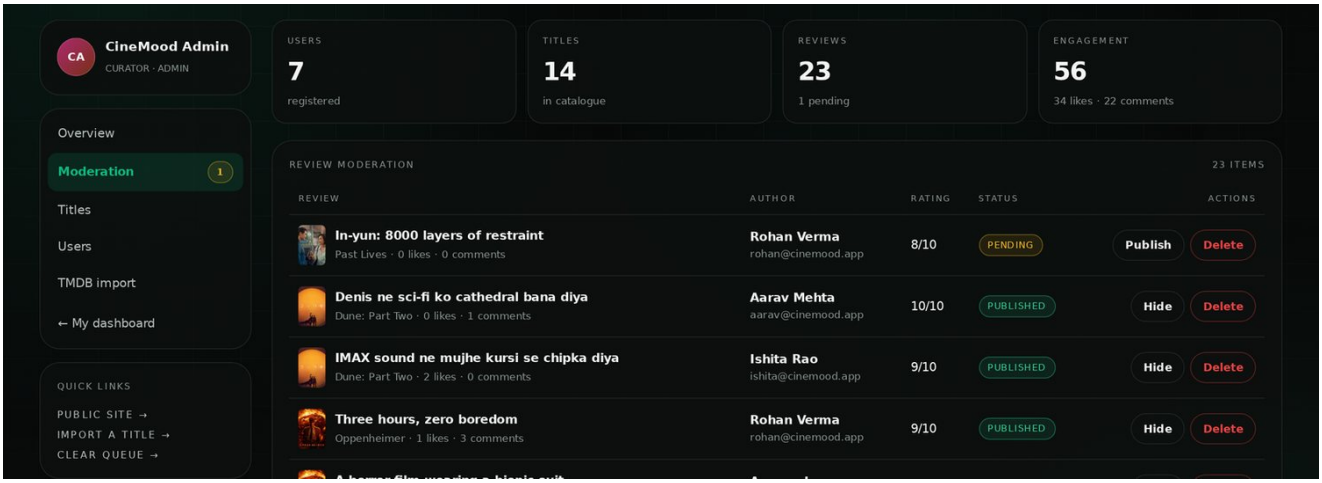

06 · ADMIN PANEL

Admin — sab kuch ek jagah

Sirf ADMIN role wale log hi andar aa sakte hain (server-side check, URL se bhi nahi ghus sakte). Aapne jo maanga tha — "kaunsa user, kis movie par comment/review, sabse zyada likes" — sab yahin visible hai.

Overview · KPI cards, newest members, latest comments (user + review context)

Moderation · review + author email + rating + publish/hide/delete

06 · ADMIN PANEL (CONTD.)

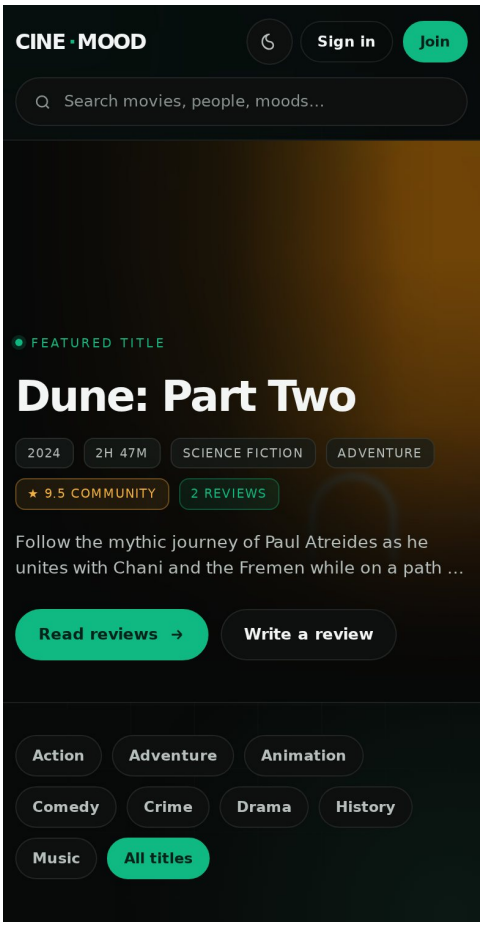

Catalogue, users aur TMDB import

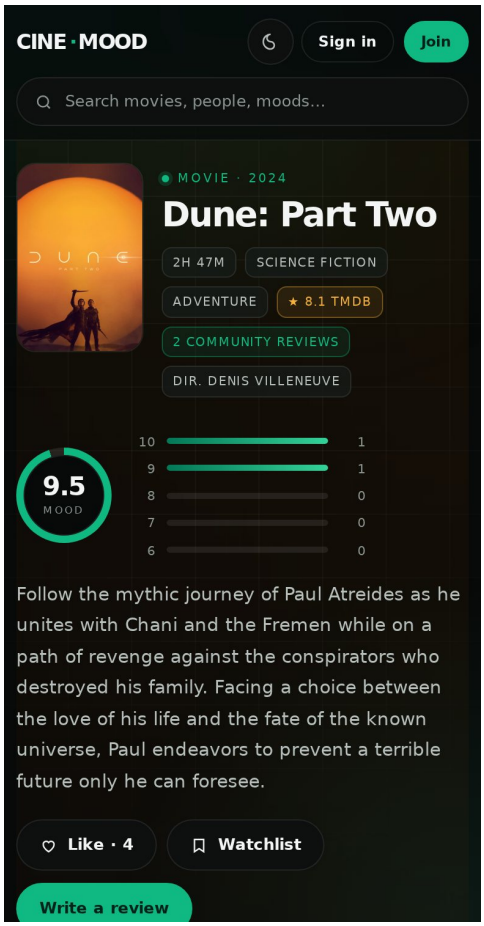

Titles	Feature/unfeature (home hero + rails), hide/show, per-title reviews & likes count
Users	Role switch (make admin / demote), delete user (cascade), activity counts, join time
Comments	Latest comments list with author + parent review; delete action available
TMDB import	Live TMDB search → one-click import (poster, backdrop, cast, genres, synopsis, rating)

07 · MOBILE

Phone par "app jaisa" feel

390px par zero horizontal scroll: header do row mein (brand + actions, phir full-width search), poster rails swipe hote hain, detail page poster+title side-by-side phir content full width.

390 × 844 · home aur film detail (iPhone-ish viewport)

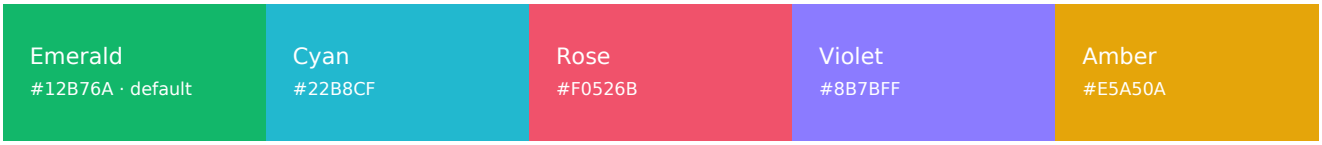

08 · DESIGN

Design system — ek hi file mein

`app/globals.css` mein poora system hand-written hai (koi Tailwind nahi, koi UI kit nahi): tokens, components, themes aur responsive rules. Isse site tez rehti hai aur branding consistent.

Base	Ink #08090B · glass panels · hairline borders · mono micro-labels
Accents	Emerald (default) · Cyan · Rose · Violet · Amber — palette switcher header mein
Modes	Dark (default) + real light mode, localStorage mein yaad, no flash on load
Type	Outfit (display) · Poppins (body) · IBM Plex Mono (labels) via next/font
Components	.poster-card · .review-card · .score-ring · .dist · .stat-card · .table · .chip · .panel
Motion	Hover lift, rail snap, ring fill, reduced-motion respect
A11y	Focus-visible rings, aria-labels on icon buttons, semantic landmarks, 44px touch targets

ACCENT PALETTE — HEADER MEIN SWITCH

KAISE BANAYA

Design decisions

— Tailwind nahi — poora CSS tokens par (--accent, --surface, --border), isliye theme switch ek attribute se hota hai

— Har theme ke liye contrast check: body text 7:1, muted text 4.5:1 se neeche nahi

— Same component mobile aur desktop par — sirf grid badalta hai, markup nahi

— Poster images local /public se (fast LCP), TMDB imports CDN se with next/image allow-list

— Score ring SVG-based — koi chart library nahi, koi runtime cost nahi

09 · TECH

Stack — sab free tier

Layer	Choice	Cost
Framework	Next.js 15 App Router + React 19 + TypeScript	₹0
Auth	Auth.js v5 — Google OAuth + demo email, JWT, role gating	₹0
DB	SQLite (local demo) → Neon Postgres (production)	₹0
ORM	Prisma 6 (schema + seed script included)	₹0
Metadata	TMDB API — search, details, import	₹0
Images	Local posters now · TMDB CDN · Cloudinary free for uploads	₹0
Host	Vercel Hobby	₹0

SECURITY

Backend solid kaise hai

- Har mutation server-side auth check ke baad — `requireUser()` / `requireAdmin()`
- Har request body Zod se validate hoti hai (rating 1–10, body 20–4000 chars, email format)
- Admin actions ek hi enum-based route se — review.status / review.delete / title.feature / user.role / user.delete / comment.delete
- Ek user ek film par sirf ek review (unique constraint + upsert) — spam-proof
- Role JWT claim mein, DB se re-check on every admin action
- Cascade deletes — user hataya to uske reviews/comments bhi saaf

API

Endpoints (sab zod-validated)

POST	/api/reviews — review create/update (upsert per user+film)
POST	/api/reviews/[id]/like — like toggle, naya count return
POST	/api/reviews/[id]/comments — comment add (1–600 chars)
POST	/api/titles/[id]/like — LIKE ya WATCHLIST toggle
POST	/api/profile — naam + bio update
POST	/api/admin/action — 7 admin actions, ek enum route
GET	/api/search?q= — instant search (title/overview/director)
GET/POST	/api/tmdb + /api/tmdb/import — live search aur one-click import

10 · CHALAYEIN

Local demo — 4 commands

```
$ npm install
$ npx prisma generate && npx prisma db push
$ node prisma/seed.mjs
$ npm run dev → http://localhost:3000
```

Demo logins (password nahi chahiye)

Email	Kya hota hai
admin@cinemood.app	ADMIN — admin panel + moderation sab khulta hai
koi bhi email (you@x.com)	MEMBER — review, like, comment, watchlist

Google login on karna (aapka client ID aane ke baad)

- Google Cloud Console → Credentials → OAuth client ID (Web application)
- Redirect URI: `http://localhost:3000/api/auth/callback/google` aur production domain
- `.env` mein `AUTH_GOOGLE_ID`, `AUTH_GOOGLE_SECRET` daalo → restart
- Login page par Google button khud live ho jayega; demo login fallback bana rahega

TMDB real data

`TMDB_API_KEY` daalte hi Admin → TMDB import se koi bhi film one-click import ho jaati hai (v3 key ya v4 read token, dono auto-detect). Bina key ke 14 seeded films + local posters chalte rehte hain.

CODE MAP

Kaun si file kya karti hai

app/	Pages — home, movies, film detail, reviews, community, dashboard, admin, login, about, legal
app/api/	9 route handlers (reviews, likes, comments, search, profile, admin, tmdb)
components/	17 client components — header, search, theme switcher, composer, comments, admin bits
lib/	prisma client, session helpers, queries, formatting, TMDB client
prisma/	schema + seed script + 14 films ka seed data
auth.ts	Google + demo providers, JWT callbacks, admin promotion
public/	14 posters + 14 blurred backdrops (local, fast, no external calls)

11 · DEPLOY

Free hosting: Neon + Vercel (₹0)

Step	Kya karna hai
1. Neon	neon.tech → project → pooled Postgres connection string copy karo
2. Schema	prisma/schema.prisma mein provider "sqlite" → "postgresql"
3. Push	DATABASE_URL="postgres://..." npx prisma db push && node prisma/seed.mjs
4. Vercel	Repo import → env vars: DATABASE_URL, AUTH_SECRET, AUTH_TRUST_HOST, NEXT_PUBLIC_SITE_URL, ADMIN_EMAIL, AUTH_GOOGLE_ID, AUTH_GOOGLE_SECRET, TMDB_API_KEY
5. Build	Already set: prisma generate && next build
6. Domain	cinemood.vercel.app / apna domain add karo → NEXT_PUBLIC_SITE_URL + Google redirect update

Yaad rahe: preview abhi SQLite par chalta hai (zero setup). Vercel par file-based DB persist nahi hoti — isliye production mein Neon Postgres hi use karna hai, wahi README mein step-by-step likha hai.

LEGAL

Piracy se doori — by design

— Koi file host, magnet, torrent, embedded player ya "download" button nahi — kabhi nahi

— TMDB metadata with standard attribution ("not endorsed or certified by TMDB")

— /legal page mein DMCA process, user-content rules aur privacy likha hai

— Reviews admin se moderate hote hain (publish / hide / delete) — advertiser aur host dono safe

DEPLOY KE BAAD

5-minute sanity checklist

— Home page khulta hai aur posters dikhte hain (backdrops 404 nahi)

— admin@your-domain se login → /admin khulta hai, moderation queue load hoti hai

— Ek review publish karo → rating distribution aur score update ho

— Watchlist toggle → /dashboard?tab=watchlist mein film dikhe

— Sitemap: /sitemap.xml par films listed hon; /robots.txt disallow /admin, /dashboard

12 · AAGE KYA

Aapke paas ab kya hai

Ek complete, chalne wala product — code, seed data, local posters/backdrops, README, aur ye brief. Sab kuch `/home/user/cine` mein hai.

Aap ye karo	Result
Google OAuth credentials do	Real Google login live (10 min ka kaam)
TMDB API key do	Poora catalogue + one-click import (unlimited films)
Neon account banao	Production DB — Vercel par deploy ready
Domain final karo	cinemood.vercel.app / apna naam — SEO + OG image already ready

OPTIONAL · PHASE 2

Bol do to ye add kar dunga

- Profile photo upload (Cloudinary free) + followers/following
- Curated "collections" — jaise "Best of 2024", "Weekend watchlist"
- Weekly email digest / newsletter signup (Resend free tier)
- Hindi/English UI toggle — copy pehle se Hinglish-friendly hai
- Report button + full audit log for admin actions

CINE·MOOD — reviews, not downloads.

Live preview chal raha hai. Login karke admin@cinemood.app se admin panel kholo — moderation, users, TMDB import sab try karo.
