CINE·MOOD

UPDATE 02 · ADMIN VERDICT + GITHUB READY

Admin verdict aa gaya — aur ab woh "solid" lagta hai

Harsh ka review ab site ka flagship card hai: animated gradient border, Instrument Serif headline, drop cap, pinning aur "— Harsh" signature. Admin panel se ek click mein pin / unpin. Repo + SSH key bhi ready.

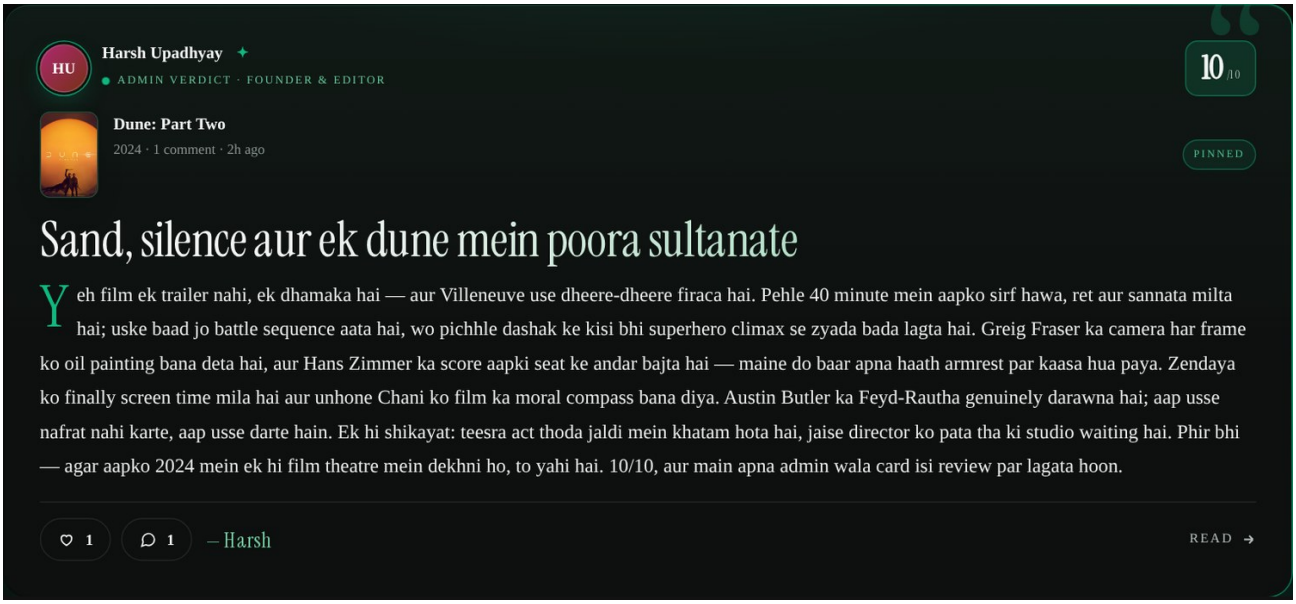

ADMIN VERDICT CARD · LIVE RENDER

24	1	7	5	6
REVIEWS	PINNED VERDICT	MEMBERS	ACCENT THEMES	NEW FILES

01 · ADMIN VERDICT

Harsh ka review = site ka flagship card

Login admin se hota hai (admin@cinemood.app), aur jis bhi review ka author ADMIN role wala hai wo automatically premium treatment paata hai. Neeche wahi card desktop par.

Admin verdict card · serif headline, drop cap, gradient hairline, PINNED badge, "— Harsh" signature

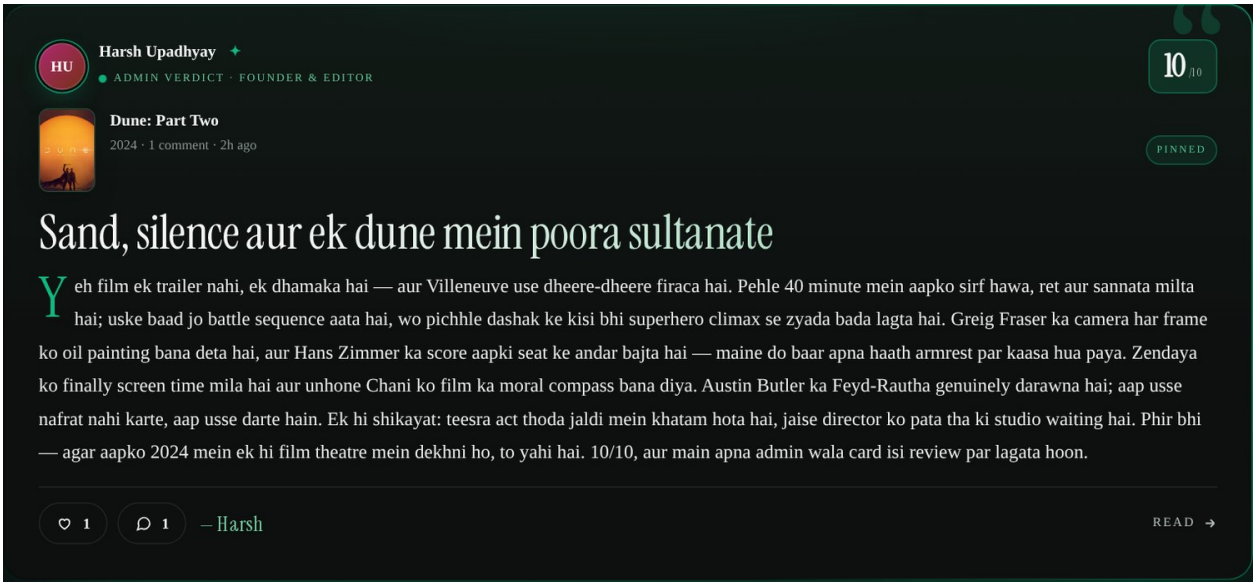

Andar kya kya hai

- Animated conic border — accent colour card ke chaaro taraf dheere ghoomta hai (9s loop)
- Shine sweep — har 7 second mein ek soft light card ke upar se guzarti hai
- Instrument Serif headline — naya premium serif font, gradient text clip ke saath
- Drop cap — pehla letter bada serif, magazine feel
- ADMIN VERDICT · FOUNDER & EDITOR label + pulsing dot, naam ke saath ✦ crown
- PINNED chip + "— Harsh" signature footer mein
- Mobile par bhi same card, font aur spacing scale ho jaate hain
- Reduced motion respect — animation off ho jaati hai agar user ne system mein disable kiya ho

02 · SITE BHAR MEIN PINNED

Feed, film page — sab jagah top par

Database mein `Review.featured` field add hui hai. Sort order ab `featured DESC → createdAt DESC` hai, isliye pinned verdict home feed, reviews feed aur us film ke page par sabse pehle aata hai — baaki reviews normal rehte hain.

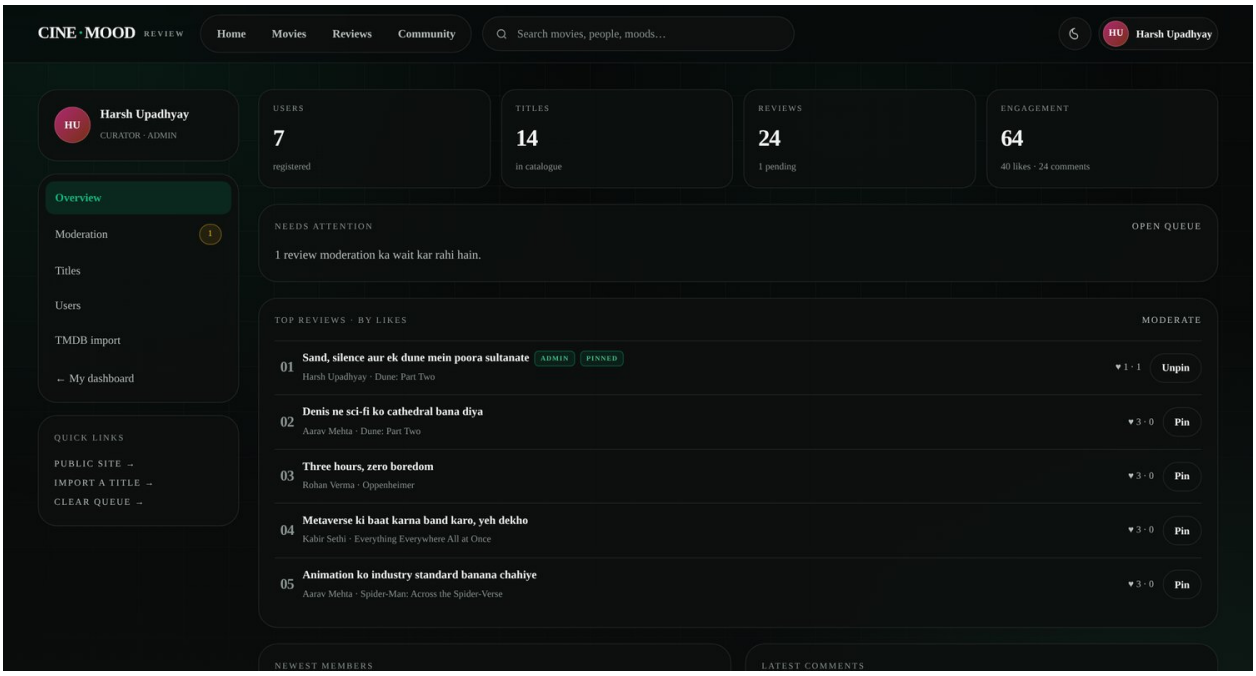

Home feed · verdict sabse upar pinned, neeche community reviews

Ek click pin: Admin → Overview → "Top reviews · by likes" mein har review ke saath Pin / Unpin button hai. Moderation table mein bhi "Pin as verdict" milta hai.

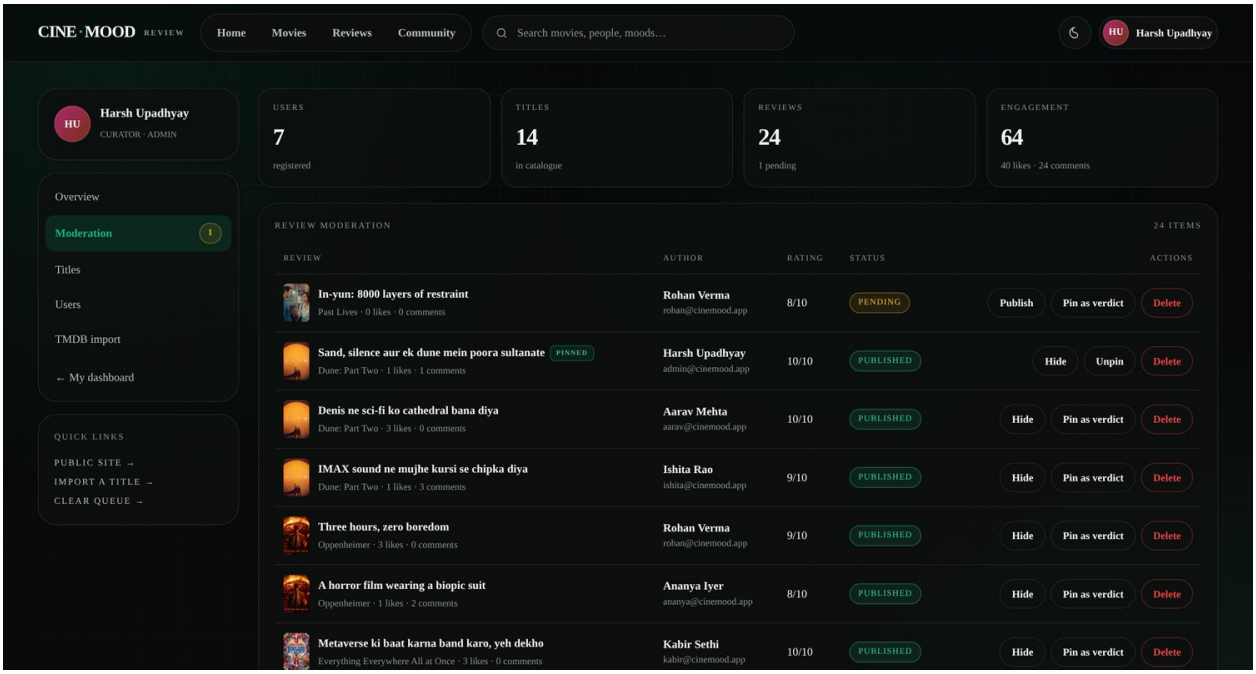

03 · ADMIN PANEL

Dashboard aur moderation — solid

Overview ab action-oriented hai: KPI cards, "needs attention", top reviews by likes with instant pin/unpin, newest members aur latest comments (kis user ne kis review par comment kiya).

Admin overview · top reviews by likes, ADMIN + PINNED badges, Pin/Unpin actions

Moderation queue · publish / hide / pin as verdict / delete + PINNED badge

04 · TECHNICAL

Kya-kya badla (code level)

File / layer	Change
prisma/schema.prisma	Review mein `featured Boolean @default(false)` + index
prisma/seed.mjs	Admin user = Harsh Upadhyay; ek flagship verdict seeded aur featured: true
components/ReviewCard.tsx	Admin role detect → `.admin-verdict` variant, pin chip, signature
app/globals.css	~150 lines naya: conic gradient border, shine sweep, drop cap, serif type scale, mobile tweaks
app/layout.tsx	Instrument Serif (next/font) → `--font-serif`
lib/queries.ts	Reviews select mein role, order `featured → date`
api/admin/action	Naya action `review.feature` (value: true/false)
app/admin/page.tsx	Top-reviews panel + Pin/Unpin buttons + ADMIN/PINNED badges

Commands (already chal chuke)

```
$ npx prisma db push
$ node prisma/seed.mjs → 7 users · 14 titles · 24 reviews
$ npx next build → ✓ compiled, 27 routes
```

Note

Vercel/Neon par deploy karte waqt sirf provider `sqlite → postgresql` badalna hai; baaki sab same. Purane reviews ka `featured` default false hi rahega, isliye kuch break nahi hota.

05 · GITHUB

Repo push — bas deploy key add karo

Aapne write access offer kiya tha. Sandbox mein ek SSH key ban gayi hai — uski public key neeche hai. Aap use GitHub repo → Settings → Deploy keys mein paste karo aur "Allow write access" tick karo. Aapke bas add karte hi main commit aur push kar dunga.

PUBLIC KEY — copy karo

```
ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIL85Z2f4t/M5Ig8LUAdqtPWjYxp266lnTfRMk82txC1G cinemood-deploy@arena
```

Step	Kya karna hai
1	github.com/Dev-Harshupadhyay/Cinenvood → Settings → Deploy keys → Add deploy key
2	Title: "cinemood-arena" · Key: upar wali line paste · ☑ Allow write access
3	Mujhe "done" bolo — main push kar dunga (branch: main)
4	Vercel → Import repo → env vars (DATABASE_URL, AUTH_SECRET, AUTH_GOOGLE_ID, AUTH_GOOGLE_SECRET, TMDB_API_KEY)
5	Build: prisma generate && next build · Domain add karo

Push ke liye main ye chalata hoon

```
$ git remote add origin git@github.com:Dev-Harshupadhyay/Cinenvood.git
$ git push -u origin main
```

AAGE

Aap bolo, main ye kar dunga

- Google OAuth credentials add + login page pe test
- TMDB key se poora catalogue import (14 → jitni films chahiye)
- Neon par Postgres migrate + Vercel deploy, phir live link
- Admin verdict ke aur variants (video verdict, "Editor's pick" rail)

CINE·MOOD v2 — ab flagship verdict bhi hai.

Admin se login karo → /admin → Pin/Unpin try karo. Film page kholo, card dekho.
